Hi,

There was some talk about the Lava Canyon Fire. I would like the Panel members to consider that - as of last summer- 650 sq. km within close proximity to Fish Lake look like this.

Much appreciated,
Federico G. Osorio

P Do you really need to build this mine? Please think of the environment!

> An idea of what the 650 sq. km Lava Canyon fire looks like this spring. So far there is no sign of growth of any grass in burned areas. Ash storms on the plateau can be seen from the Chilcotin River valley near Alexis Creek. All of the area is under range tenure. Photos were taken by range tech <Name Removed>

> Chilcotin Forest District
