

# Environmental Policy

## 1. Purpose

This Policy is intended to apply to NWP Coal Canada Limited (the “Company”), our employees, and contractors.

The Company is committed to effective environmental management in all areas of the company’s business. We recognize that our environmental management of environment impacts pays a significant role in social value and being a valued community partner.

## 2. Approach

NWP’s approach to environmental management in our Environmental Assessment Application has been to use a proven science-based approach to identify, quantify and mitigate risks. NWP has also, where practicable, incorporated Indigenous knowledge and input from Indigenous nations. This robust approach to identifying and, in turn, minimizing environmental impacts will be applied throughout the lifecycle of the Crown Mountain Project from development and operation through to closure.

NWP will work to achieve industry best practice in managing the environmental and social impacts of mining and processing operations.

## 3. Objectives

### 3.1 NWP will:

- Manage and control the impacts of the operations on air, water and land
- Minimize land disturbance and ecosystem degradation
- Re-establish disturbed areas as sustainable ecosystems and community assets
- Use all resources wisely
- Reduce, reuse and recycle wastes
- Partner with suppliers, contractors and supply chains to identify and implement opportunities to achieve lower carbon emissions from the extraction, processing, transport and end use of steelmaking coal from the Project

- Recognize and work to meet the needs of the community and Indigenous nations
- Provide appropriate training to employees and contractors to ensure a clear understanding of environmental impacts and responsibilities
