RE: Investigations & Preliminary Engineering for Lake Manitoba Outlet  
Channels Options C & D Deliverable D3, Final – Rev 0

---

Dear Mr. Baldwin:

KGS Group is pleased to submit an electronic copy on the FTP site of our Final Report Investigations and Preliminary Engineering for Lake Manitoba Outlet Channels Options C and D Deliverable D3-Final Rev. 0. Three hard copies of the report will follow by courier.

We appreciate the opportunity to provide engineering services to Manitoba Infrastructure.

Sincerely,

## 1.0 INTRODUCTION AND SCOPE OF WORK

### 1.1 INTRODUCTION

Manitoba Infrastructure retained KGS Group to complete Investigations and Preliminary Engineering for Lake Manitoba Outlet Channels Options C and D. The “Summary Report” for the project was issued in May 2017<sup>1</sup>. Annual monitoring of groundwater and surface water is included in the project as required under Work Breakdown Structure (WBS) 1010.04 and WBS 1010.05 monitoring plan described in the memo Deliverable D1 Groundwater Level Monitoring and Quarterly Water Quality Sampling. The first annual monitoring report was issued on July 1, 2017 (Deliverable D2 Annual Monitoring Report to July 1, 2017). This report is the second annual monitoring report.

This annual monitoring report summarizes groundwater and surface water monitoring activities from July 1, 2017 through July 1, 2018. The report documents seasonal data collection activities and provides comments regarding surface and groundwater conditions, building on Deliverable D6 Groundwater Study (included as Appendix C of the May 2017 Summary Report) and Deliverable D2 Annual Monitoring Report to July 1, 2017<sup>2</sup>. Both of these reports contain background information on the project that should be used for reference. Manitoba Infrastructure directed that no further monitoring on Route C be conducted, with the exception of transducer downloads at Route C, beginning in May 2017. Downloads of transducers at Route C were not conducted in fall 2017 or May 2018 with Manitoba Infrastructure’s agreement. Download of these instruments was deferred to the next stage of the project. A general site plan showing the location of Route C can be found in Appendix D3-A Plate D4-1. Detailed plans of Route C can be found in the May 2017 Summary Report.

---

<sup>1</sup> Investigations and Preliminary Engineering for LMB Outlet Channels Options C and D Summary Report, May 2017, Prepared by KGS Group.

<sup>2</sup> Investigations and Preliminary Engineering for LMB Channels Options C and D Deliverable D2, Annual Monitoring Report to July 1, 2017. Final Rev 0, Prepared by KGS Group.

## 1.2 SCOPE OF WORK

The Scope of Work for Deliverable D3 includes the following:

1. Route D Field Programs:
  - Groundwater Elevation, Sampling and Transducer Download; Summer - August 2017; Fall October 2017; and Spring - May 2018
  - Surface Water Sampling and Transducer Download Summer - August 2017; Fall - October 2017; and Spring - May 2018
2. Summary comments and conclusions relating to seasonal changes in groundwater and surface water levels and quality.

In addition to the original scope of work, a summary of recommended instrumentation maintenance repairs is included in Appendix D3-D. Drilling logs for 15-RD-04A, 15-RD-04B and 15-RD-PW-1 (2016) are included in this report in Appendix D3-E for completeness as they were not included in the 2016 Geotechnical report submission.

An additional scope of work was approved to report metals analysis for groundwater and surface water samples. Deliverable D1 (Groundwater, Surface Water and Geotechnical Investigations Program) included a one-time analysis of metals for groundwater and a one-time analysis for surface water. Upon review of the deliverable, Manitoba Infrastructure (MI) decided that additional analysis of metals would be beneficial towards generating additional data useful for the future Environmental Impact Statement for the project. KGS Group determined that further analysis of metals could be retrieved from data already collected by the lab from 2017 and 2018 sample events. KGS Group requested the metals data from the laboratory and incorporated it into existing tables as shown in this report. The laboratory certificates of analysis are contained in Appendix D-3-F.

The retrieved metals analyses for the **surface water can be relied upon** since samples were acidified in the field using standard procedures.

The retrieved metals analyses for the **groundwater should be used for reference only**, and not relied upon as the samples were not required to be analysed for extended metals at the time of sampling, and therefore were not filtered and preserved in the field. The groundwater samples were filtered and preserved in the laboratory. This means that there was opportunity for potential precipitation of metals during sample transit and potential removal of this precipitate when the samples were filtered in the laboratory.

## **2.0 ROUTE D**

### **2.1 WATER ELEVATION, TEMPERATURE AND TRANSDUCER DOWNLOADS**

#### **2.1.1 Field Program Activities**

The locations of instruments are shown on the plan set in Appendix D3-A, and on Table D3-1. The transducer at 15-RD-PW1 was replaced in October 2017. Installation methodology was as described in the Deliverable D2 report for other instruments.

The elevations of the packers and transducers have been updated in Appendix Table D3-B-4. The transducer for TH-ED-01 was installed 24 m above the open bedrock zone. The transducer for 15-RD-PW1 was re-installed with a longer cable to the bottom of the casing, immediately above the top of the open bedrock monitoring zone.

Foam inserts were installed in all other flowing wells to prevent water from rising above ground surface in the casing and freezing in winter, which would cause the casing to break and result in uncontrolled groundwater flow. Foam inserts consisted of an aluminum rod surrounded by a foam packer. These inserts were installed after the October 2017 monitoring and were removed during the May 2018 monitoring. Because the May 2018 monitoring was the last under this contract, the foam packers were re-installed. Vibrating wire piezometers were read in August 2017, October 2017 and May 2018.

Transducers were re-installed at two surface water locations: Reed Lake (D3) and Clear Lake (D4), in May 2018 to replace damaged instruments.

Repairs and maintenance are required at several instruments as summarized in Appendix D3-D.

#### **2.1.2 Results**

Results of the groundwater monitoring program on Route D are shown on Table D3-1 showing all instrumentation monitored, instrument details and depth to groundwater level, pressure or vibrating wire readings and appropriate conversions to geodetic elevations. Transducer

hydrographs are shown in Appendix D3-B. A summary of mechanical packer and transducer installation is shown in Table D3-B-1.

### **Well TH-ED-01W**

Well TH-ED-01W (Figure D3-B-1) is confined and flowing artesian and has a deep overburden till cover of 25 m. In 2016 to 2017, groundwater elevations decreased slightly through the winter from elevation (El.) 254 m on December 8, 2016 to El. 253.5 m on March 28, 2017 when they began to rise through April 27, 2017 to 254.2 m, decreasing slightly through the end of May 2017. Although groundwater elevations showed a slight seasonal increase in April 2017, they were only 0.2 m higher than elevations in December 2016. The water elevation rise is attributed to a piezometric response to the regional groundwater system and may include a response to Lake Manitoba water levels (Appendix D3-C), which began to rise on April 1, 2017, as well as transmission of the piezometric response from a regional recharge in upland areas. At Well TH-ED-01W, groundwater elevation declined between May 2017 and April 2018 to a low of El. 252.5 m on April 14, 2018. The groundwater elevation then increased to El. 253.40 m on May 26, 2018. Regional lake levels at Lake Manitoba and Lake St. Martin also declined between May 2017 and April 2018 (Appendix D3-C). Well TH-ED-01W is located in the deep bedrock valley that is beneath most of the channel alignment. Regional recharge occurs at a distance from the valley in upland bedrock areas, and not through the local 25 m till to the bedrock.

Declining temperature was recorded at well TH-ED-01W throughout the 2016 to 2017 winter, from 6 °C to 4°C. A steeper decrease occurred in early March 2017 to 1°C and remained low through late May 2017. The temperature increased to 10.7°C on September 15, 2017 then decreased gradually to 4° C on February 17, 2018 before dropping steeply to 1°C or less. The temperature began to rise on May 18, 2018 and was 3.2°C by May 29, 2018. The timing of the temperature decrease in both years was well before the groundwater elevation increase in early April. The transducer in well TH-ED-01W is 24 m above the bedrock open hole, so is not in contact with aquifer groundwater, therefore temperature results are not considered to be representative of true aquifer response and appear to be influenced by surrounding ground temperatures. A longer cable is required on the transducer to place it closer to the bedrock

monitoring zone. This will require opening and re-installing the packer assembly in the artesian well.

A comparison of water quality results from October 2016 and May 2017 and July 2017, October 2017, and May 2018, as discussed in Section 2.2 (Table D-3-3), does not show any changes in water quality with seasonal recharge events. This indicates that the bedrock beneath the buried valley is isolated from local recharge.

### **Well 15-RD-PW-1**

Groundwater elevation at Well 15-RD-PW-1 (Figure D3-B-2) is confined and flowing and has a deep overburden till cover of 16.3 m. In 2016 and 2017, groundwater elevations decreased slightly throughout the winter from El. 254.4 m on December 8, 2016 to El. 253.6 m on March 11, 2017, and then began to rise through early April 2018. These temperature variations appear to be influenced by surrounding ground temperatures. There was a sharp drop in elevation of 0.29 m on April 20, 2018 with a corresponding increase on May 24, 2018. The transducer did not connect in the field for the May 2017 download. It was removed during the August 2017 sampling event and a new transducer was installed with a longer cable during the October 2017 sampling event. Groundwater elevations continued to drop to 254.1 m on April 21, 2018 and rose with the spring melt to 254.2 m.

Temperature readings in 2016 at 15-RD-PW-1 followed a pattern similar to well TH-ED-01W, with a slow decrease in the winter to 4°C; however, a further drop occurred in late April 2017 followed by a rise to 11.6°C on August 1, 2018. The new transducer was installed in October 2017 just above the bedrock and has registered a constant temperature of approximately 6.5°C since that time. The stable temperature data at well 15-RD-PW-1 following transducer lowering provides clear evidence of the separation of the groundwater system beneath the buried valley and the surface water system.

### **Reed Lake (D3)**

At Reed Lake (Appendix D3-B-3), water elevation remained constant through the spring 2017 melt. A very slight elevation increase was seen beginning in late March 2017 from El. 248.60 m on March 29 to El. 248.80 m on April 6, 2017. The water elevation increase began at the same time air temperatures rose above zero and water temperature fluctuations began, coincident with the spring melt. Elevations declined slightly to El. 248.31 m on November 11, 2017, when the transducer stopped working due to freeze up. The initial reading on May 25, 2018 was El. 248.17 m; however, this reading may have been influenced by freeze up and should be re-confirmed with a re-survey of the transducer tip elevation. Water temperatures rose from 3°C in mid-April 2017 to 12°C by the end of May 2017, peaking at 20.65 °C on August 2, 2017, and then declining through the fall to 4.4°C on November 11, 2017.

### **Clear Lake (D4)**

At Clear Lake (Appendix D3-B-4), the transducer was frozen in the ice in January 2017 as shown by the sub-zero temperatures. This affected the elevation readings, which are not considered representative until early April 2017. An increase in elevation was seen in late July 2017 during the two high precipitation events shown on the top of the graph. The transducer malfunctioned in November 2017 at freeze-up when the temperature decreased to 0°C. The new transducer installed in May 2018 recorded an elevation of El. 248.17 m at the time of installation; however, this should be confirmed with a re-survey of the transducer tip elevation. Temperature increased from 0°C in early April 2017, to 15°C in late May 2017. A maximum temperature of 21°C was measured in August 2017, dropping to 0°C at freeze-up in November 2017.

## **2.2 GROUNDWATER AND SURFACE WATER QUALITY**

### **2.2.1 Field Program Methodology**

Nine sites were sampled for surface water along Route D on May 25, 2017; August 3, 2017; October 5, 2017; and May 30, 2018. Locations and site descriptions are as follows:

Site	Name	Zone	Easting	Northing
D1	L. Manitoba	14U	530539.95 m E	5680326.47 m N
D2	Watchorn Cr.	14U	531563.42 m E	5683591.34 m N
D3	Reed L.	14U	531162.00 m E	5687747.00 m N
D4	Clear L.	14U	530962.69 m E	5690166.46 m N
D5	Clark's Drain	14U	533740.43 m E	5697563.34 m N
D6	Birch Cr.	14U	532476.89 m E	5698322.06 m N
D7	Woodale Drain	14U	531665.45 m E	5699876.73 m N
D8	Birch Cr.	14U	533225.95 m E	5702310.91 m N
D9	L. St. Martin	14U	532723.36 m E	5706356.42 m N

- **D1 (Lake Manitoba)** – end of the mile road near the entrance to Watchorn Provincial Park with sampling occurring approximately 200 m into lake to reduce the shoreline effect.
- **D2 (Watchorn Creek)** – along P.R. 237.
- **D3 (Reed Lake)** – accessed by walking approximately 700 m from a gravel road through a pasture and was sampled on the west side of the lake.
- **D4 (Clear Lake)** – accessed by walking approximately 500 m along an old road allowance. The sample was collected on the west side of the lake.
- **D5 (Clark's Drain)** – sampled where the drain crossed the road.
- **D6 (Birch Creek at PTH6)** – upstream of Highway 6.
- **D7 (Woodale Drain)** – sampled approximately 150 m west of Highway 6.
- **D8 (Birch Creek)** – sampled upstream side of the road.
- **D9 (Lake St. Martin)** – Sampled at location of hydrometric station (at the end of Hilbre Rd.). Location is between Route C and Route D outlets.

Sites were all sampled on upstream side of roads (where roads were present). A reacher pole with disposable surface water sampling cup was used to collect water from most sampling sites to minimize shore effects and any disturbance from sampling activities. At a few locations samples were collected directly into the sample bottle.

### Groundwater

Groundwater samples along Route D were taken at six locations on May 23 to 24, 2017; August 1 to 2, 2017; October 3 to 4, 2017; and May 28 to 30, 2018:

- 15-RD-PW1
- TH-ED-01W
- TH-ED-01P
- TH-ED-03
- TH-GD-02
- TH-GD-07

Sampling tubing was opened and groundwater was allowed to purge from the well under artesian conditions until groundwater parameters (conductivity and temperature) stabilized. Stable groundwater parameters were achieved at all sample locations within 20 minutes.

Field measurements for pH, conductivity and dissolved oxygen were taken for each sample. A flow through cell was used for groundwater samples. Groundwater and surface water samples were stored in a cooler chest at 4°C for transport to the laboratory. Samples for metals analysis (calcium, magnesium, potassium, and sodium) were filtered and preserved in the laboratory since extended metals analysis were not required for the 2017 and 2018 samples at the time they were collected. The samples were analyzed at ALS Laboratory in Winnipeg, Manitoba. Samples for isotope analysis were collected in clean 40 ml glass vials and shipped to the Environmental Isotope Laboratory at the University of Waterloo in Waterloo, Ontario.

A quality control/quality assurance assessment of all groundwater data was performed, including review of laboratory QA/QC, replicate samples and any trip or field blanks.

### **Quality Assurance/Quality Control**

Standardized sampling procedures and protocols were used during the sampling events to ensure representative samples were collected in a controlled manner so that scientifically defensible comparisons can be made.

**Chain of Custody** – KGS Group ensured all Chain-of-Custody procedures were properly undertaken and holding times were not exceeded.

**Sample Collection** – Samples were collected directly from the pump outlet. Disposable latex gloves were worn when handling each piece of equipment and groundwater sample, using a new pair for each sample collection. Samples were collected in clean containers (supplied by the lab) and stored at the appropriate temperature using the proper preservatives.

**Laboratory Qualification** – ALS Environmental of Winnipeg, Manitoba, is a Canadian Association for Laboratory Accreditation Inc. (CALA) accredited analytical testing laboratory. Criteria and guidelines used for assessment of analytical data were clearly established with the laboratory to ensure the appropriate detection limits were used. The University of Waterloo Environmental Isotope Laboratory is a modern research facility with an international client base encompassing universities, government agencies, consulting firms and other mainstream institutions.

**Duplicate Samples** – Duplicate samples were submitted at a frequency of 10% for the total samples submitted to assess the quality of the laboratory analysis. The field duplicates were labelled such that the laboratory did not know the samples were duplicates. Laboratory standards and duplicates are run regularly by ALS and are on file. One duplicate sample was collected for QA/QC as shown on the data summary tables. Laboratory duplicate samples for stable isotope analysis by the University of Waterloo Environmental Isotope Laboratory are shown on Table D3-8.

**Field Equipment** – Field equipment such as field chemistry meters were calibrated prior to use or installation.

## 2.2.2 Results

### Groundwater

All groundwater samples were taken from bedrock monitoring wells with sampling zones found on Table D3-1, except TH-ED-03, which was completed in the till. Field chemistry from the groundwater program is shown in Table D3-2. General groundwater quality is shown on Table D3-3, with metals shown on Table D3-4. Results were compared against Canadian Drinking Water Quality Guidelines, since the aquifer is potable and is the sole source of drinking water in the region. Results exceeding the applicable guidelines were highlighted. The Canadian Council of Ministers of the Environment (CCME) criteria for Freshwater Aquatic life was shown on the tables for reference.

**Water type** – Water type analysis was presented when sampled in November 2016 and May 2017 as discussed in Deliverable D6 and D4 submitted previously.

**Water Quality Criteria November 2016 to May 2018** – The groundwater samples collected exceeded the drinking water criterion for turbidity; however, these samples are from monitoring wells and are not used for drinking water. All samples exceeded the criterion for hardness (359 to 420 mg/L; criterion 80 to 100 mg/L), typical of the carbonate aquifer and the till unit. All

sulphate samples were below the criterion of 500 mg/L. The sample at till well TH-ED-03 had much lower sulphate (22 – 58 mg/L) and lower conductivity (489 – 616 µS/cm) and hardness values (125 – 319 mg/L) than the bedrock samples. Nitrate values were below detection (generally <0.0051 mg/L), or at very low concentrations (TH-ED-01P) at all samples except the initial November 2016 sample of the till well TH-ED-03, which may not have been purged adequately due to low sample recovery. Boron, calcium, potassium and strontium values in November 2016 were also noticeably lower in the till well. Manganese, molybdenum, nickel, tungsten, uranium, and vanadium were found at low concentrations in the till well in November 2016, but were higher than in the bedrock samples.

**Bacteria Sampling** - Bacteria sampling was not conducted in groundwater in 2017 or 2018.

**Metals** - Metals analyses from October 2016 through May 2018 were all below the Health Canada Canadian Drinking Water Guidelines and the Canadian Council of Ministers of the Environment (CCME) Freshwater Aquatic Life Criteria, except manganese in August 2017 and October 2017 in TH-ED-3, a till well which typically had higher levels of turbidity.

### **Surface Water**

Field chemistry from the surface water program November 2016 through May 2018 is shown in Table D3-5. Dissolved oxygen in samples ranged from 1.6 to 12.7 mg/L with lower values generally in August 2017, with a few in May 2018. Turbidity values were 4 to 11 NTU at the Inlet (D1 Lake Manitoba), 5 to 11 NTU at the Outlet (D9 Lake St. Martin), and were less than 5 NTU in the remainder of the samples except for: D5 Clarks Drain in October 2017 (11 NTU); D6 Birch Creek in October 2017 (5.6 NTU); D7 Woodale Drain in August 2017 (7.7 NTU); and D8 Birch Creek in May 2017 (5 NTU), October 2017 (10.5 NTU) and May 2018 (16.3 NTU). General surface water quality is shown on Table D3-6, with metals shown on Table D3-7. The Manitoba Water Quality Standards, Objectives and Guidelines MWQSOG November 28, 2011 were used where available for parameters analyzed. The CCME criteria for Freshwater Aquatic life are also shown and were used where MWQSOG were not listed. Results exceeding the applicable guidelines were highlighted.

Lake St. Martin sample D9 and Lake Manitoba sample D1 have a distinct geochemical composition that is different from the other surface water points due to their elevated sodium and chloride. Within the buried bedrock valley, groundwater quality was generally stable over the 2016 to 2018 monitoring period except for a slow increase in conductivity, hardness, and sulphate in bedrock well TH-ED-01P. Seasonal variations are not evident in the wells sampled, further supporting the relative isolation of the groundwater system below the buried bedrock valley from the surface water system.

Minor seasonal changes were noted in most surface water samples including an increase or decrease in sulphate, alkalinity, hardness, and conductivity. Watchorn Creek samples increased in conductivity, bicarbonate, hardness, and chloride over the 2016 to 2018 sampling period. The sample at Woodale Drain in October 2017 was taken during a dry period with very little flow and showed increased conductivity, alkalinity, hardness, chloride, sulphate, and total phosphorous.

**Water Type** – Water type analysis was presented in Deliverable D6 and D2 and can be referenced.

**Water Quality Criteria** – All of the samples from Lake St. Martin (D9) exceed the CCME criterion for chloride for long term exposure (value 130 mg/L, criterion 120 mg/L). The sodium concentrations in Lake Manitoba and Lake St. Martin reflect the contribution of saline groundwater on the west side of Lake Manitoba. The Birch Creek drainage is isolated from this system, and drains into Lake St. Martin. All samples except Reed Lake (D3) and Woodale Drain (D7) in November 2016 and May 2017 exceed the CCME long-term criterion for fluoride (values 0.13 to 0.37 mg/L, criterion 0.12 mg/L).

All samples exceeded the MWQSOG for phosphorous of 0.025 mg/L for streams entering lakes except: D1 Lake Manitoba in May 2017 and May 2018; D3 Reed Lake in August 2017, October 2017, and May 2018; D5 North Clark's Drain in November 2016; D6 South Birch Creek in November 2016 and May 2017; D7 Woodale Drain in November 2016; and D9 Lake St. Martin in November 2016, August 2017, and October 2017. Clear Lake and Reed Lake were evaluated with these aquatic life criteria because of the interconnected nature of the Birch Creek drainage system. Considering the sampling record through May 2018, the Birch Creek sample D8 has

similar values of phosphorous (0.02 mg/L) to Reed Lake (D3) and Clear Lake (D4). Surface water samples exceeded the various CCME trigger ranges for phosphorous as follows:

- Mesotrophic (0.010 to 0.020 mg/L)
  - D1 Lake Manitoba: 1 of 5 dates
  - D5 North Clark's Drain: 1 of 5 dates
  - D6 South Birch Creek: 2 of 5 dates
  
- Meso-eutrophic (0.020 to 0.035 mg/L)
  - D1 Lake Manitoba: 3 of 5 dates
  - D2 Watchorn Creek: 1 of 5 dates
  - D3 Reed Lake: 4 of 5 dates
  - D4 Clear Lake: 3 of 5 dates
  - D5 North Clark's Drain: 2 of 5 dates
  - D6 South Birch Creek: 2 of 5 dates
  - D7 Woodale Drain: 1 of 5 dates
  - D8 Birch Creek: 2 of 5 dates
  - D9 Lake St. Martin: 5 of 5 dates
  
- Eutrophic (0.035 to 0.1 mg/L)
  - D1 Lake Manitoba: 1 of 5 dates
  - D2 Watchorn Creek: 4 of 5 dates
  - D3 Reed Lake: 1 of 5 dates
  - D4 Clear Lake: 2 of 5 dates
  - D5 North Clark's Drain: 2 of 5 dates
  - D6 South Birch Creek: 1 of 5 dates
  - D7 Woodale Drain: 3 of 5 dates
  - D8 Birch Creek: 3 of 5 dates
  
- Hyper-eutrophic (> 0.1 mg/L)
  - D7 Woodale Drain: 1 of 5 dates (this sample was taken during very low flow conditions)

Unionized ammonia values were calculated by KGS Group based on field pH and temperature as shown Table D3-6 with all samples below the CCME criterion of 0.019 mg/L.

**Bacteria Sampling** – Ranges of Total Coliform and *E. coli* at the various sampling locations were as follows:

Sampling Location	Total Coliform (MPN/100 mL)	E. coli (MPN/100 mL)
D1 Lake Manitoba	74 to 5,380	<1 to 114
D2 Watchorn Creek	860 to 2,420	20 to 70
D3 Reed Lake	300 to 3,270	19 to 33
D4 Clear Lake	38 to 2,420	1 to 281
D5 North Clarks Drain	750 to 4,480	18 to 64
D6 South Birch Creek	100 to 2,420	<2 to 3.8
D7 Wooddale Drain	231 to 2,130	<1 to 122
D8 Birch Creek	230 to 2,420	39 to 249
D9 Lake St. Martin	100 to 1,990	1 to 613

**Metals** - Metals analyses from November 2016 through May 2018 were all below the MWQSOG (Tier III Freshwater Aquatic Life) and the CCME Freshwater Aquatic Life Criteria, except for the following samples:

- D-1 Lake Manitoba November 2016 - Aluminum
- D-8 Birch Creek May 2018 - Iron
- D-2 Watchorn Creek August 2017 and May 2018 Phosphorous
- D-7 Wooddale Drain August 2017, October 2017 and May 2018 Phosphorous
- D-8 Birch Creek May 2018 Phosphorous
- D-7 Wooddale Drain October 2017 – Uranium

### Quality Assurance/Quality Control Evaluation

For groundwater from November 2016 through May 2018, relative percent difference (RPD) on Table D3-3 of duplicate samples were all below 5%. The RPD target (10% for all parameters where the analysis value was more than 5 times the detection limit) was met at all samples except for fluoride at GD-02 in November 2016, where the RPD was 17%.

For surface water, the RPDs on Table D3-6 were below the RPD target (10% for samples where the analysis values were more than 5 times the detection limit) except at D4 Clear Lake in May 2017 (total nitrogen and total Kjeldahl nitrogen were 19%) and at D4 Clear Lake in May 2018 (total dissolved phosphorous and total phosphorous were 25% and 18% respectively and total suspended solids were 62%).

A field blank was taken for each surface water sampling event. All parameters analyzed in the field blank were below detection except total dissolved phosphorous and total phosphorous (in November 2016 only), and antimony, calcium, magnesium and manganese in August 2016, all detected at very low concentrations that do not affect the interpretation of the analytical results. For metals analyses, the RPD target of 10% (for samples where the analysis values were more than 5 times the detection limit) was exceeded for the following samples:

- aluminum (16.5%) D9 Lake St. Martin November 2016, (102%) D-4 Clear Lake October 2017; and
- manganese (36%) D-4 Clear Lake October 2017

These variations can be present in surface water since they are not filtered and varying levels of sediment may be present even with standard sampling procedures.

### **Stable Isotopes**

The stable isotopes Oxygen 18 ( $^{18}\text{O}$ ) and deuterium ( $^2\text{H}$ ) are used as surface water tracers in water quality studies. These isotopes are conservative tracers, reflecting the origin of the water. Surface water containing fresh snowmelt during a spring runoff or flood would typically have more negative  $^{18}\text{O}$  values, in comparison to other times of the year. Less negative  $^{18}\text{O}$  values would be expected later in the season, particularly in lakes where evaporation occurs. Groundwater in areas of recent recharge has less negative  $^{18}\text{O}$  values, while more negative values can indicate older water.

Isotope samples were collected for the  $^{18}\text{O}$  and  $^2\text{H}$  for wells TH-ED-01W, 15-RD-PW1, as well as Lake Manitoba (D1), Clear Lake (D4), and at Lake St. Martin (D9). Sample results are shown on Table D3-8 and are plotted on Plate D3-1. The Global meteoric water line and the Gimli, Manitoba meteoric water line are plotted as reference. Surface water samples that plot to the right of these lines can indicate evaporation.

Groundwater samples for August 2017, October 2017, and May 2018 are in a similar position to the November 2016 samples (as shown in Deliverable D6 Plate D6-10), and May 2017 samples

(plotted in Deliverable D2 Plate D2-2). Sample TH GD-08 was sampled prior to sealing in 2016 and data is plotted in Deliverable 06 Plate D6-10.

The sample for Lake Saint Martin (D9) plots far to the right of the meteoric water lines and had an  $^{18}\text{O}$  value of -8.1 to -8.6 VSMOW. The Lake Manitoba sample had a slightly less negative  $^{18}\text{O}$  value of -8.1 to -8.3 VSMOW. The least negative values in both lakes in October 2017 and May 2018 are indicative of these surface waters having undergone a summer season (2017) of evaporation from the lakes, followed by a spring (2018) with low runoff and low lake levels.

The groundwater samples in August 2017 through May 2018 are very stable, with little seasonal variation, ranging from an  $^{18}\text{O}$  of -15.3 at Well 15-RD-PW-1 to an  $^{18}\text{O}$  of -14.9 at Well TH-ED-01W. These results suggest that this groundwater is reflective of relatively recent recharge from meteoric precipitation (rain and snow) with a relatively low residence time in the subsurface. This is expected since groundwater aquifer recharge in the region is known to be via rain and snowmelt within high elevation bedrock areas with thin overburden cover.

From August 2017 through May 2018 the surface water sample at Clear Lake (D-4) ranged from an  $^{18}\text{O}$  of -10.3 in May 2018 to an  $^{18}\text{O}$  of -7.19 in October 2017. These values are distinct from the groundwater samples. The Clear Lake samples exhibited a wider range of values from August 2017 to May 2018 than in the previous sampling. The May 2018 value was more similar to the May 2017 value (Table D-3-8) while the August and October values showed increasing depletion of  $^{18}\text{O}$ . All surface water  $^{18}\text{O}$  isotope values are consistently less negative than the groundwater values, indicating a distinct surface water source characterized by seasonal evaporative processes. The large variation in isotope concentrations is likely related to seasonal precipitation and evaporation rates.

### 3.0 CONCLUSIONS

The following conclusions regarding trends and seasonal effects can be made from the data collected over the 2016 to 2018 sampling period to July 1, 2018:

1. Minor water elevation changes at well TH-ED-01 and well 15-RD-PW-1 were observed and may be related to a combination of lake level rise and aquifer piezometric response, in combination with regional recharge from upland areas outside of the Route D buried bedrock valley area.
2. Temperature at well 15-RD-PW-1 was a constant 6.5 °C after a longer transducer cable was installed, enabling the transducer to measure groundwater temperature more closely to the bedrock surface. Previous temperature variations in the transducer readings at Routes D and C are not representative of bedrock aquifer conditions due to the shallow placement of the transducer in the well and groundwater temperature variability.
3. The constant groundwater temperature at well 15-RD-PW-1 (following transducer depth relocation) indicates the isolation of groundwater beneath the buried valley, from the surface water system or any other groundwater temperature effects,
4. Seasonal differences in groundwater quality on Route D were not observed between November 2016 and May 2018 in the wells sampled. Increasing parameters were observed at well TH-ED-01P.
5. Minor seasonal differences in surface water quality (e.g. sulphate, alkalinity, hardness, conductivity) between November 2016 and May 2018 were observed at most locations in the Birch Creek watershed. Increasing parameters were observed at D2 Watchorn Creek.
6. The water type and isotopic signatures for samples from Lake Manitoba and Lake St. Martin differ from the rest of the surface water (Clear Lake) and groundwater samples.
7. The stable isotope signature for bedrock groundwater (TH-ED-01W and 15-RD-PW1) and surface water (Clear Lake) samples is widely different and suggests negligible, if any, contribution of groundwater discharge to Clear Lake.
8. The water type signature for the groundwater samples differs from surface water samples along most locations sampled along the Birch Creek drainage, as shown in the Deliverable D6 and D2 reports; however, the sample from Watchorn Creek is more similar to the groundwater samples, due to a higher chloride contribution.

## 4.0 RECOMMENDATIONS

1. A longer cable should be installed for the transducer at well TH-ED-01W so that the instrument tip is placed closer to the bottom of the casing. This extension is required to obtain accurate temperature measurements of the active groundwater aquifer system.
2. The following repairs and actions are needed for the maintenance of the monitoring system and should be carried out during the next monitoring event:
  - Repair and re-survey staff gauges at D3 Reed Lake and D4 Clear Lake;
  - Re-survey transducer tips at Reed Lake and Clear Lake;
  - Protect cable at D3 Reed Lake with an animal-resistant protective sleeve;
  - Install a new Heron cable at D4 Clear Lake on the transducer with animal-resistant protective sleeve; and
  - Conduct repairs listed in Appendix D3-D at:
    - TH-GD-05
    - 15-RD-05
    - 15-RD-02
    - 15-RD-01
    - BH-D109
3. Transducers on Route C should be downloaded during the next sampling event. The functionality of the equipment should be checked and longer cables should be installed so that the transducer tip is near the bottom of the casing. These instruments on Route C provide valuable baseline regional monitoring for future works on Route D.
4. Baseline monitoring data should be set up in a project database. A series of interpretive plots such as time concentration plots, geochemical plots, and statistical analysis should be created during the next stage of the project for data interpretation and as necessary for environmental licensing compliance.
5. Expanded isotope monitoring at more surface water locations is recommended for future phases, as results have proven useful to differentiate groundwater and surface water sources.

## **5.0 STATEMENT OF LIMITATIONS AND CONDITIONS**

### **5.1 THIRD PARTY USE OF REPORT**

This report has been prepared for Manitoba Infrastructure to whom this report has been addressed and any use a third party makes of this report, or any reliance on or decisions made based on it, are the responsibility of such third parties. KGS Group accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions undertaken based on this report.

### **5.2 GEO-ENVIRONMENTAL STATEMENT OF LIMITATIONS**

KGS Group prepared the geo-environmental conclusions and recommendations for this report in a professional manner using the degree of skill and care exercised for similar projects under similar conditions by reputable and competent environmental consultants. The information contained in this report is based on the information that was made available to KGS Group during the investigation and upon the services described, which were performed within the time and budgetary requirements of Manitoba Infrastructure. As the report is based on the available information, some of its conclusions could be different if the information upon which it is based is determined to be false, inaccurate or contradicted by additional information. KGS Group makes no representation concerning the legal significance of its findings or the value of the property investigated.

VW = Vibrating Wire

STP = Standpipe

\* Pressure gauges were installed on standpipes at: TH-GD-08; 15-RD-01 (10.4 m STP); and 15-RD-02. Pressure readings at other standpipes were taken with a handheld gauge.

Notes:

- BH-BC series drilled and surveyed in 2011.
- 15-RC series drilled in 2015. Ground elevations were estimated using LiDAR.
- TH-GC and TH-EC series drilled and surveyed in 2016.
- Transducers were installed December 8, 2016 in wells TH-ED-01W and 15-RD-PW1.

**Notes:**

1. Mechanical packers installed in wells TH-ED-01W and 15-RD-PW1 in December, 2016.
2. Mechanical packer and transducer were removed from well 15-RD-PW1 in August, 2017, as the transducer was not functioning properly.
3. Mechanical packer and transducer were reinstalled in well 15-RD-PW1 in October, 2017.
4. pH readings for May 28, 2018 are generally higher than laboratory readings and may indicate pH probe malfunction.

\*\*- No Data

NA = Not Applicable

EC = Electrical Conductivity

DO = Dissolved Oxygen

ORP = Oxidation-Reduction Potential

**Notes:**

EQL = Estimated Quantitation Limit = The lowest level of the parameter that can be quantified with confidence  
 "-" = No Data  
 E.C. = Electrical Conductivity  
 T.K.N. = Total Kjeldahl Nitrogen  
 T.D.S. = Total Dissolved Solids  
 RPD = Relative Percent Difference

- All values are expressed in milligrams per litre (mg/L) unless otherwise specified.
- Health Canada - Canadian Drinking Water Quality Guidelines (HC-CDWQ). Updated October 2014.  
 MAC = Maximum Acceptable Concentration  
 AO = Aesthetic Objectives
- CCME - Canadian Council of Ministers of the Environment. Canadian Environmental Quality Guidelines, 1999. Updated February 6, 2014.  
 Canadian Water Quality Guidelines for the Protection of Aquatic Life
- Equivalent to 10 mg/L as nitrate-nitrogen. Where nitrate and nitrite are determined separately, levels of nitrite should not exceed 3.2 mg/L, which is equivalent to 1 mg/L nitrite-nitrogen.
- Chloride toxicity to freshwater organisms was evaluated using tests with both CaCl<sub>2</sub> and NaCl salts.
  - Long-term exposure - May not be protective of certain species of endangered and special concern freshwater mussels. Refer to fact sheet for more explanation
  - Short-term exposure - derived with severe-effect data (such as lethality) and are not intended to protect all components of aquatic ecosystem structure and function, but rather to protect most species against lethality during severe but transient events. Refer to fact sheet for more information
  - Guideline is dependant on type of plant. See CCME summary table for details.
    - Foliar damage**
      - = 100-178 mg/L for almond apricots and plums
      - = 178-355 mg/L for grapes, peppers, potatoes and tomatoes
      - = 355-710 mg/L for alfalfa, barley, corn, and cucumbers
      - >710 mg/L for cauliflower, cotton, safflower, sesame, sorghum, sugar beets, and sunflowers
    - Rootstocks**
      - = 180-600 mg/L for stone fruit (peaches, plums, etc.)
      - = 710-900 mg/L for grapes
    - Cultivars**
      - = 110-180 mg/L for strawberries
      - = 230-460 mg/L for grapes
      - = 250 mg/L for boysenberries, blackberries, and raspberries
- Guideline for total ammonia is pH and Temperature dependent. See Factsheet for details.

7. Turbidity Guidelines (see fact sheet for complete details):

**Clear Flow:**  
 Maximum increase of 8 NTUs from background levels for a short-term exposure (e.g. 24 hr period).  
 Maximum average increase of 2 NTUs from background levels for a longer term exposure (e.g. 30 day period).  
**High Flow or Turbid Waters:**  
 Maximum increase of 8 NTUs from background levels at any one time when background levels are between 8 and 80 NTUs.  
 Should not increase more than 10% of background levels when background is >80 NTUs.

- Waterworks systems that use a surface water source or a groundwater source under the direct influence of surface water should filter the source water to meet the following health-based turbidity limits, as defined for specific treatment technologies. Where possible, filtration systems should be designed and operated to reduce turbidity levels as low as possible, with a treated water turbidity target of less than 0.1 NTU at all times. Where this is not achievable, the treated water turbidity levels from individual filters:
  - For chemically assisted filtration, shall be less than or equal to 0.3 NTU in at least 95% of the measurements made, or at least 95% of the time each calendar month, and shall not exceed 1.0 NTU at any time.
  - For slow sand or diatomaceous earth filtration, shall be less than or equal to 1.0 NTU in at least 95% of the measurements made, or at least 95% of the time each calendar month, and shall not exceed 3.0 NTU at any time.
  - For membrane filtration, shall be less than or equal to 0.1 NTU in at least 99% of the measurements made, or at least 99% of the time each calendar month, and shall not exceed 0.3 NTU at any time. If membrane filtration is the sole treatment technology employed, some form of virus inactivation\* should follow the filtration process. Turbidity values greater than 1 NTU are shaded.
- Public acceptance of hardness varies considerably. Generally, hardness levels between 80 and 100 mg/L (as CaCO<sub>3</sub>), provide acceptable balance between corrosion and incrustation; where a water softener is used, a separate unsoftened supply for cooking and drinking purposes is recommended.
- If trigger ranges for total phosphorus are exceeded, the potential exists for an environmental impact. If trigger range is not exceeded, but TP is more than 50% above baseline values, the potential exists for an environmental impact.  
 Trigger ranges (µg/L): ultra-oligotrophic <4 meso-eutrophic 20-35  
 oligotrophic 4-10 eutrophic 35-100  
 mesotrophic 10-20 hyper-eutrophic >100
- Short-term exposure (24 to 96 hours) concentrations which indicate potential for severe effects during transient events (spill events to aquatic receiving environments and infrequent releases of short-lived/non-persistent substances).  
 These are NOT protective guidelines.
- Long-term exposure guideline that protects all forms of aquatic life for indefinite exposure periods (>7d exposures for fish and invertebrates, 24h exposures for aquatic plants and algae).

 - Exceedance of HC-CDWQ Guidelines

**Notes:**

EQL = Estimated Quantitation Limit = Lowest level of the parameter that can be quantified with confidence

"-" = No Data

RPD = Relative Percent Difference

1. All values are expressed in milligrams per litre (mg/L) unless otherwise specified.
2. Health Canada - Canadian Drinking Water Quality Guidelines (HC-CDWQ). Updated October 2014.  
MAC = Maximum Acceptable Concentration  
AO = Aesthetic Objectives  
OG = Operational Guideline
3. CCME - Canadian Council of Ministers of the Environment. Canadian Environmental Quality Guidelines, 1999. Updated February 6, 2014.  
Guidelines for Canadian Drinking Water Quality.  
Community Water Supplies (Health Canada - Canadian Drinking Water Quality Guidelines)  
Canadian Water Quality Guidelines for the Protection of Aquatic Life  
Canadian Water Quality Guidelines for the Protection of Agriculture Water Uses
4. This is an operational guidance value, designed to apply only to drinking water treatment plants using aluminum-based coagulants. The operational guidance value of 0.1 mg/L applies to conventional treatment plants, and 0.2 mg/L applies to other types of treatment systems.
5. Total aluminum should not exceed 0.005 mg/L in waters with a pH below 6.5.  
The concentration of total aluminum should not exceed 0.1 mg/L in waters with a pH greater or equal to 6.5.
6. Short-term exposure (24 to 96 hours) concentrations which indicate potential for severe effects during transient events (spill events to aquatic receiving environments and infrequent releases of short-lived/non-persistent substances).  
These are NOT protective guidelines.
7. Long-term exposure guideline that protects all forms of aquatic life for indefinite exposure periods (>7 day exposures for fish and invertebrates, 24 hour exposures for aquatic plants and algae).
8. For the following equations, hardness is expressed as CaCO<sub>3</sub> in mg/L and the guideline is in µg/L.
  - a. **Cadmium** Guideline: The long-term CWQG of 0.09 µg/L is for waters of 50 mg CaCO<sub>3</sub>/L hardness. When water hardness is >0 to <17 mg/L, CWQG is 0.04 µg/L. At other hardness values, the CWQG can be calculated with the equation  $CWQG = 10^{(0.83[\log(\text{hardness})] - 3.2)}$  µg/L valid for hardness between 17 and 280 mg CaCO<sub>3</sub>/L.
  - b. **Cadmium** Guideline: The short-term benchmark concentration of 1.0 µg/L is for waters of 50 mg CaCO<sub>3</sub>/L hardness. When water hardness is >0 to <5.3 mg/L, CWQG is 0.11 µg/L. At other hardness values, the benchmark can be calculated with the equation  $Benchmark = 10^{(1.016(\log[\text{hardness}]) - 1.71)}$ , valid for hardness between 5.3 and 360 mg CaCO<sub>3</sub>/L.
  - c. **Copper** Guideline =  $e^{(0.8545[\ln(\text{hardness})] - 1.465)} * 0.2$  µg/L;
  - d. **Lead** Guideline =  $e^{(1.273[\ln(\text{hardness})] - 4.705)}$  µg/L;
  - e. **Nickel** Guideline =  $e^{(0.76[\ln(\text{hardness})] + 1.06)}$  µg/L

9. If trigger ranges for total phosphorous are exceeded, the potential exists for an environmental impact. If trigger range is not exceeded, but TP is more than 50% above baseline values, the potential exists for an environmental impact.

Trigger ranges (µg/L):	ultra-oligotrophic	<4	meso-eutrophic	20-35
	oligotrophic	4-10	eutrophic	35-100
	mesotrophic	10-20	hyper-eutrophic	>100

10. Low level phosphorous was not analyzed for groundwater samples. Phosphorous values in Table D3-4 analyzed by ICP are at detection limits higher than some trigger values shown in Note 9.

 - Exceedance of HC-CDWQ Criteria

**TABLE D3-5  
SURFACE WATER FIELD CHEMISTRY - ROUTE D  
LAKE MANITOBA OUTLET CHANNELS**

Sample No.	Date	Parameter								
		pH (units)	EC (µS/cm)	Temp. (°C)	ORP (mV)	DO (mg/L)	Turbidity (NTU)	Odour	Colour	Comments
D1 - Lake MB	7-Nov-16	8.1	492	4.6	35.9	12.68	9.17	none	slightly cloudy	sampled adjacent to Watchorn Prov. Park
	25-May-17	8.3	936	14.1	205.5	7.33	5.04	none	none	sampled adjacent to Watchorn Prov. Park approx. 75 m from shoreline at depth of 0.1 m; very windy; light rain
	3-Aug-17	8.0	932	25.2	-25.0	5.22	11.24	none	none	sampled adjacent to Watchorn Prov. Park approx. 40 m from shoreline at depth of 1 m; calm; small waves
	5-Oct-17	6.9	945	11.6	-69.0	8.28	24.7	none	grey/cloudy	sampled adjacent to Watchorn Prov. Park approx. 40 m from shoreline at depth of 1 m; calm; small waves
	30-May-18	7.2	849	21.0	-15.7	6.96	3.73	none	grey/cloudy	sampled adjacent to Watchorn Prov. Park approx. 100 m from shoreline at depth of 0.8 m; calm; water appears clear and is low compared to previous visits
D2 - Watchorn Creek	7-Nov-16	7.8	485	4.5	31.8	8.31	0.79	none	none	sampled from side road off gravel road
	25-May-17	7.4	603	13.8	175.6	3.59	1.59	none	none	sampled approx. 40 m south of PR 237 from side road using reacher pole; very windy; light rain
	3-Aug-17	6.9	629	21.5	-22.1	1.60	2.76	none	none	sampled approx. 40 m south of PR 237 from side road using reacher pole; lots of vegetation; calm; slow flow
	5-Oct-17	6.6	869	10.4	-68.5	4.85	1.06	none	none	sampled approx. 40 m south of PR 237 from side road using reacher pole; lots of vegetation; calm; slow flow
	30-May-18	7.5	853	21.1	-6.3	7.18	1.15	none	none	sampled approx. 40 m south of PR 237 from side road using reacher pole at approx. 0.5 m depth; visible flow;
D3 - Reed Lake	7-Nov-16	7.5	469	6.2	-24.4	7.77	1.32	none	none	sampled at 3.5' depth beyond logger
	25-May-17	7.7	540	14.1	152.0	6.16	2.70	none	none	sampled beyond staff gauge/edge of reeds using reacher pole; windy; light rain
	3-Aug-17	7.9	502	25.1	-22.1	4.66	1.85	none	none	sampled beyond staff gauge/edge of reeds using reacher pole; lots of vegetation; calm
	5-Oct-17	6.3	572	12.2	-70.5	6.32	1.01	none	none	sampled beyond staff gauge/edge of reeds using reacher pole; lots of vegetation; cows may have been here - lots of cattails knocked down; calm; water appears clear
	30-May-18	6.9	583	21.9	-38.0	3.39	1.43	none	none	sampled approx. 3 m beyond staff gauge/edge of reeds using reacher pole at approx. 0.5 m depth; water appears clear
D4 - Clear Lake	7-Nov-16	7.8	532	6.6	34.2	10.96	4.01	none	none	sampled approximately 5 m beyond reeds in open water
	25-May-17	8.3	696	12.8	131.4	5.63	1.09	none	none	sampled beyond staff gauge/edge of reeds using reacher pole; windy; light rain
	3-Aug-17	7.0	655	23.2	-20.4	4.52	0.89	none	none	sampled beyond staff gauge/edge of reeds using reacher pole; calm
	5-Oct-17	6.9	731	10.0	-72.7	6.82	6.51	none	none	sampled beyond staff gauge/edge of reeds using reacher pole; calm; water low; sediment disturbed while sampling; lots of geese and swans on lake
	30-May-18	7.2	789	19.9	-25.2	2.39	4.2	none	none	sampled beyond staff gauge/edge of reeds using reacher pole at approx. 0.5 m depth; calm; water low; recent muskrat pushup approx. 30 m north of staff gauge; tracks (snowmobile?) coming right up to gauge; lots of copepods in water
D5 - Clark's Drain	7-Nov-16	8.2	481.5	4.1	-32.8	10.63	0.96	none	none	sampled on E side of road
	25-May-17	8.1	622.5	14.4	118.0	7.07	3.21	none	none	sampled on E side of road in front of middle culvert; water approx. 0.2 m deep; windy
	4-Aug-17	7.2	675	18.1	-13.6	2.44	2.16	none	none	sampled on E side of road in front of middle culvert with reacher pole; water approx. 0.3 m deep; calm; water
	5-Oct-17	6.6	791	9.2	-74.3	5.51	10.99	none	none	sampled on E side of road standing in front of middle culvert; calm; water below bottom of culvert

**TABLE D3-5

Sample No.	Date	Parameter								
		pH (units)	EC (µS/cm)	Temp. (°C)	ORP (mV)	DO (mg/L)	Turbidity (NTU)	Odour	Colour	Comments
	30-May-18	7.2	742	17.8	-23.5	3.05	1.09	none	brownish	sampled on E side of road standing in front of southern most culvert; two culverts were blocked with mud and sticks; water flowing slowly through northern most culvert

**TABLE D3-5  
SURFACE WATER FIELD CHEMISTRY - ROUTE D  
LAKE MANITOBA OUTLET CHANNELS**

Sample No.	Date	Parameter								
		pH (units)	EC (µS/cm)	Temp. (°C)	ORP (mV)	DO (mg/L)	Turbidity (NTU)	Odour	Colour	Comments
D6 - Birch Creek	7-Nov-16	8.1	584	5.4	-48.3	7.64	0.89	none	none	sampled on W side of Hwy 6 where Woodale Drain joins Birch Creek
	25-May-17	8.0	876	14.0	133.9	6.42	3.37	none	none	sampled on W side of Hwy 6 where Woodale Drain joins Birch Creek using reacher pole; water approx. 0.35 m
	3-Aug-17	7.2	848	18.9	-13.4	3.54	1.4	none	none	sampled on W side of Hwy 6 where Woodale Drain joins Birch Creek using reacher pole; water approx. 0.8 m
	5-Oct-17	6.7	943	8.2	-77.4	7.06	5.55	none	none	sampled on W side of Hwy 6 where Woodale Drain joins Birch Creek using reacher pole; water approx. 0.3 m deep; calm; water flowing slowly
	30-May-18	7.2	867	19.6	-26.7	3.11	4.29	none	slightly brown	sampled on W side of Hwy 6 where Woodale Drain joins Birch Creek using reacher pole; water approx. 0.3 m deep; calm; water low; good flow
D7 - Woodale Drain	7-Nov-16	8.2	477	5.6	-51.0	8.68	1.08	none	none	sampled on N side of #167N, 75 m from Hwy 6
	25-May-17	7.7	541	13.2	125.2	5.21	0.97	none	none	sampled on N side of Ira Pontius Rd., 100 m west of Hwy 6; water approx. 0.15 m deep; windy
	3-Aug-17	6.8	706	18.9	-10.6	7.30	7.74	none	none	sampled on N side of Ira Pontius Rd., 100 m west of Hwy 6; very little water, lots of vegetation; calm
	5-Oct-17	6.6	1746	5.9	-72.5	6.02	0.87	none	none	sampled on N side of Ira Pontius Rd., 100 m west of Hwy 6; very little water (deepest spot 0.05 m deep), lots of vegetation - some vegetation in sample; calm
	30-May-18	6.8	742	18.3	-16.6	3.29	1.15	none	none	sampled on N side of Ira Pontius Rd., 100 m west of Hwy 6; very little water (deepest spot 0.08 m deep); light drizzle
D8 - Birch Creek	7-Nov-16	8.3	567	5.5	-54.4	9.83	1.89	none	none	sampled upstream of bridge
	25-May-17	8.4	788	14.6	130.8	7.96	5.04	none	none	sampled upstream of bridge on Bittner Bay Rd. off end of culvert; water approx. 1 m deep; windy
	3-Aug-17	7.5	823	20.3	-14.9	3.70	2.97	none	none	sampled upstream of bridge on Bittner Bay Rd. off end of culvert; water >3 m deep (near top of culvert); calm
	5-Oct-17	6.4	952	9.9	-69.8	6.84	10.51	none	brownish	sampled upstream of bridge on Bittner Bay Rd. off end of culvert; very little flow; calm
	30-May-18	7.4	832	20.5	-20.5	3.57	16.3	none	brownish	sampled upstream of bridge on Bittner Bay Rd. off end of culvert; no visible flow; water level low
D9 - LSM	7-Nov-16	8.4	691	6.6	-26.1	10.58	5.15	none	none	sampled at prov. hydrometric station
	25-May-17	8.2	932	14.2	150.2	7.29	3.27	none	none	sampled south of prov. hydrometric station approx. 10 m from shoreline at depth of 1 m; windy; lake high - covering
	3-Aug-17	7.2	970	21.8	-21.6	5.37	9.42	none	none	sampled south of prov. hydrometric station at depth of 1 m; calm; lake high - covering approach road and most of
	5-Oct-17	6.4	959	10.5	-74.4	9.33	6.17	none	none	sampled south of prov. hydrometric station at depth of 0.6 m; calm, small waves; lake still high but lower than August - covering approach road approximately 0.1 m deep.
	30-May-18	6.5	960	19.2	-1.7	6.78	14.55	none	none	sampled south of prov. hydrometric station approx. 10 m off shore at depth of 0.35 m; calm, small waves; no standing water on approach road, although surface was too soft for driving

**Notes:**

"-" = No Data

NA = Not Applicable

EC = Electrical Conductivity

DO = Dissolved Oxygen

ORP = Oxidation-Reduction Potential

TABLE D3-6  
SURFACE WATER GENERAL WATER QUALITY - ROUTE D  
LAKE MANITOBA OUTLET CHANNELS

**Notes:**

EQL = Estimated Quantitation Limit = The lowest level of the parameter that can be quantified with confidence

"-" = No Data

E.C. = Electrical Conductivity

T.D.S. = Total Dissolved Solids

T.S.S. = Total Suspended Solids

TKN = Total Kjeldahl Nitrogen

RPD = Relative Percent Difference

1. MWQSOG - Manitoba Water Quality Standards , Objectives, and Guidelines - Manitoba Water Stewardship Report 2011-01, November 28, 2011.
  2. MWQSOG Tier II Objective - Equivalent induced levels of change as calculated from site-specific or regional correlation between total suspended sediment and turbidity.
  3. MWQSOG Tier II Objective - Unless it can be demonstrated that total phosphorus is not a limiting factor, considering the morphological, physical, chemical, or other characteristics of the water body, total phosphorus should not exceed 0.025 mg/L in any reservoir, lake, or pond, or in a tributary at the point where it enters such bodies of water. In other streams, total phosphorus should not exceed 0.05 mg/L.
  4. MWQSOG Tier II Objective - Cool Water, All Periods (Eq. 3). Manitoba Water Stewardship, November 2011.
  5. Total Suspended Sediment Guidelines:
    - 5 mg/L Induced Change over 30 days from background TSS <= 25 mg/L
    - 25 mg/L Induced Change over 1 day from background TSS <= 250 mg/L
    - 10% Induced Change over 1 day from background TSS > 250 mg/L
  6. CCME - Canadian Council of Ministers of the Environment. Canadian Environmental Quality Guidelines, 1999. Updated February 6, 2014.  
Canadian Water Quality Guidelines for the Protection of Aquatic Life
  7. Turbidity Guidelines (see fact sheet for complete details):
    - Clear Flow:*  
Maximum increase of 8 NTUs from background levels for a short-term exposure (e.g. 24 hr period).  
Maximum average increase of 2 NTUs from background levels for a longer term exposure (e.g. 30 day period).
    - High Flow or Turbid Waters:*  
Maximum increase of 8 NTUs from background levels at any one time when background levels are between 8 and 80 NTUs.  
Should not increase more than 10% of background levels when background is >80 NTUs.
  8. Chloride toxicity to freshwater organisms was evaluated using tests with both CaCl<sub>2</sub> and NaCl salts.
    - a. Long-term exposure - May not be protective of certain species of endangered and special concern freshwater mussels. Refer to fact sheet for more explanation.
    - b. Short-term exposure - Derived with severe-effect data (such as lethality) and are not intended to protect all components of aquatic ecosystem structure and function but rather to protect most species against lethality during severe but transient events. Refer to fact sheet for more information.
  9. Long-term exposure guideline that protects all forms of aquatic life for indefinite exposure periods (>7d exposures for fish and invertebrates, 24h exposures for aquatic plants and algae).
  10. Short-term exposure (24 to 96 hours) concentrations which indicate potential for severe effects during transient events (spill events to aquatic receiving environments and infrequent releases of short-lived/non-persistent substances).  
These are NOT protective guidelines.
  11. If trigger ranges for total phosphorous are exceeded, the potential exists for an environmental impact. If trigger range is not exceeded, but TP is more than 50% above baseline values, the potential exists for an environmental impact.
- Trigger ranges (µg/L):
- |                    |         |                 |          |
|--------------------|---------|-----------------|----------|
| ultra-oligotrophic | <4      | meso-eutrophic  | 20 - 35  |
| oligotrophic       | 4 - 10  | eutrophic       | 35 - 100 |
| mesotrophic        | 10 - 20 | hyper-eutrophic | >100     |
12. Guideline for total ammonia is pH and temperature dependent. See factsheet for details.
  13. Total Suspended Solids:
    - Clear flow - Maximum increase of 25 mg/L from background levels for any short-term exposure (e.g., 24-h period). Maximum average increase of 5 mg/L from background levels for longer term exposures (e.g., inputs lasting between 24 h and 30 d).
    - High flow - Maximum increase of 25 mg/L from background levels at any time when background levels are between 25 and 250 mg/L. Should not increase more than 10% of background levels when background is ≥ 250 mg/L.

	- Exceedance of CCME Guidelines
<b>BOLD</b>	- Exceedance of MWQSOG Guidelines

RPD = Relative Percent Difference

1. MWQSOG - Manitoba Water Quality Standards , Objectives, and Guidelines - Manitoba Water Stewardship Report 2011-01, November 28, 2011.
2. CCME - Canadian Council of Ministers of the Environment. Canadian Environmental Quality Guidelines, 1999. Updated February 6, 2014.  
Canadian Water Quality Guidelines for the Protection of Aquatic Life
3. Total aluminum should not exceed 0.005 mg/L in waters with a pH below 6.5. The concentration of total aluminum should not exceed 0.1 mg/L in waters with a pH greater than or equal to 6.5.
4. Short term duration (1 hour) should not exceed 0.34 mg/L long term duration (4 days) should not exceed 0.15 mg/L.
5. Short-term exposure (24 to 96 hours) concentrations which indicate potential for severe effects during transient events (spill events to aquatic receiving environments and infrequent releases of short-lived/non-persistent substances). These are NOT protective guidelines.
6. Long-term exposure guideline that protects all forms of aquatic life for indefinite exposure periods (>7 day exposures for fish and invertebrates, 24 hour exposures for aquatic plants and algae).
7. The following table provides guidelines for parameters based on the sample's hardness and the toxicity of the metal.

Hardness (mg/L)	Cadmium (mg/L)		Chromium (mg/L)		Copper (mg/L)		Lead (mg/L)		Nickel (mg/L)		Zinc (mg/L)	
	Chronic	Acute	Chronic	Acute	Chronic	Acute	Chronic	Acute	Chronic	Acute	Chronic	Acute

8. For the following equations, hardness is expressed as CaCQ in mg/L and the guideline is in µg/L. exposure);
  - a. **Cadmium** Guideline: The long-term CWQG of 0.09 ug/L is for waters of 50 mg CaCQ/L hardness. When water hardness is 0 to <17 mg/L, CWQG is 0.04µg/L. At hardness ≥ 17 to ≤ 280, the CWQG can be calculated with the equation CWQG (ug/L) = 10<sup>0.83</sup>[log(hardness (mg/L)) - 2.46]. At hardness >280 mg/L, the CWQG is 0.37 ug/L.
  - b. **Cadmium** Guideline: The short-term benchmark concentration of 1.0 ug/L is for waters of 50 mg CaCQ/L hardness. When water hardness is 0 to <5.3 mg/L, the short-term CWQG is 0.11 µg/L. At hardness ≥ 5.3 to ≤ 360 mg/L, the short term bench mark is calculated using this equation CWQG (ug/L) = 10<sup>1.016</sup>(log[hardness (mg/L)]-1.71). At hardness >360 mg/L, the short term benchmark is 7.7 ug/L.
  - c. **Copper** Guideline = When the water hardness is 0 to <82 mg/L, the CWQG is 2 ug/L. At hardness ≥ 82 to ≤ 180 mg/L the CDWQ is calculated using this equation: CWQG (ug/L) = e<sup>0.8545</sup>[ln(hardness (mg/L))-1.465] \* 0.2; At hardness > 180 mg/L, the CWQG is 4 ug/L, if the hardness is not known, the CDQG is 2 ug/L.
  - d. **Lead** Guideline =When the hardness is 0 to ≤ 60 mg/L, the CWQG is 1 ug/L. At hardness >60 to ≤ 180 mg/L the CWQG is calculated using: CWQG(ug/L) = e<sup>1.273</sup>[ln(hardness (mg/L))]-4.705) µg/L; At hardness >180 mg/L, the CWQG is 7 ug/L, If the hardness is unknown, the CWQG is 1 ug/L.
  - e. **Nickel** Guideline = Whan water hardness is 0 to ≤ 60 mg/L, the CWQG is 25 ug/L. At hardness >60 to ≤ 180 mg/L the CWQG is calculated using the following equation: CWQG (ug/L) = e<sup>0.76</sup>[ln(hardness)]+1.06). At hardness >180 mg/L, the CWQG is 150 ug/L. If the hardness is unknown, the CWQG is 25 ug/L.

9. MWQSOG Tier II Objective - Unless it can be demonstrated that total phosphorus is not a limiting factor, considering the morphological, physical, chemical, or other characteristics of the water body, total phosphorus should not exceed 0.025 mg/L in any reservoir, lake, or pond, or in a tributary at the point where it enters such bodies of water. In other streams, total phosphorus should not exceed 0.05 mg/L.

10. If trigger ranges for total phosphorus are exceeded, the potential exists for an environmental impact. If trigger range is not exceeded, but TP is more than 50% above baseline values, the potential exists for an environmental impact.

Trigger ranges (µg/L):	ultra-oligotrophic	<4	meso-eutrophic	20-35
	oligotrophic	4-10	eutrophic	35-100
	mesotrophic	10-20	hyper-eutrophic	>100

**Exceedance of CCME Guidelines**  
**BOLD** - Exceedance of MWQSOG Guidelines

## APPENDIX D3-B

### CONTINUOUS WATER ELEVATION AND TEMPERATURE DATA

- Notes:
1. Transducer groundwater elevation data compensated with barometric pressure data from Fisher Branch, MB (AUT) weather station.
  2. Breaks in groundwater elevation data occur where barometric data is unavailable.
  3. Average daily air temperature and precipitation data was collected from Fisher Branch (AUT) weather station.

## APPENDIX D3-D

### MAY 2018 FIELD PROGRAM AND REPAIRS NEEDED

KGS Group  
Lake Manitoba Sampling  
May 28-30, 2018

Please see the following details for the groundwater and surface water monitoring program:

The sampling program for the Lake Manitoba Outlet Channel occurred during the week of May 28, 2018. The call log and contact list was used to notify landowners and note any special access requirements. KGS Group Job Safety Analysis (JSA) sheets were updated for the project, and reviewed daily on-site.

Dan Leitch, Environmental Scientist was the field lead on the project with Luke McAllister, E.I.T. The work completed was as follows:

- Groundwater monitoring at all installations on Route D, except BH-D107 due to lack of access permission.
- Groundwater sampling at 6 wells on Route D, plus one field blank and one duplicate
- Surface water sampling at 9 locations on Route D, plus one field blank and one duplicate
- Download of logger at TH-ED-01W (#B10576), with real-time-readings before and after sampling. As noted last year, replacing the logger cable with a longer cable during the next stage of the project is recommended to get accurate temperature measurements.
- Download of barometric logger now at TH-ED-01-PP1 (#A10260)
- Download of logger at 15-RD-PW1 (#C11866)
- Re-installed foam inserts in all artesian monitoring (without packers) to facilitate transfer for next stage of the project.
- Download of loggers at Reed Lake D3 and Clear Lake D4
  - D3: Aqua troll Logger (owned by KGS Group) did not connect. Instrument was installed there since 2016 when initial MI owned Heron did not connect. Instrument was scheduled to be removed and replaced with MI owned Heron logger (#10580) and a cable. Replacement was done. The removed Aqua troll logger subsequently worked once back in the office however data did not record beyond Nov 11, 2017.
  - D4: Heron logger (#10577) would not connect. The cable and outer protective sleeve appeared to have been chewed through by an animal. The logger and cable removed and replaced with new Heron logger (#10584) (without attached cable). A new Heron cable is required to be installed with an animal proof protective sleeve to allow logger download without removal from the water. KGS Group will send the unit to the manufacturer to try to recover the data.
  - The two Herons that were used as replacements were purchased previously by MI as part of the drilling and instrumentation program.
- Transducer downloads did not occur at Route C. One of the two Route C wells was last downloaded in August 2017, while the other was last downloaded in May 2017.
- Data from the May 2018 field program will be added to the summary project tables in preparation for Deliverable D3, due July 1, 2018.
- Abnormal items/needing repair:

- TH-GD-05 – The metal casing is loose, with a 30 cm crack down one edge. PVC standpipe also moved up 4 mm during sampling. PVC standpipe and metal casing should be secured with bentonite. Very hard to get casing lid past the PVC standpipe.
- 15-RD-05 – PVC standpipe is bent inward 25cm below top, preventing removal of foam insert and sampling. Depending on depth of damage, top of PVC standpipe can be cut and a new stickup installed. Monitoring data was not able to be collected.
- 15-RD-02 – water is leaking from within the casing and pooling at the base. Repair of the casing is required.
- 15-RD-01 – top of PVC standpipe had broken off (reduced top of casing by 4.25 cm). An obstruction at 1.497 m from top of casing made it very difficult to place foam insert back in standpipe), but it was replaced. Repair of the casing would be required.
- BH-D109: Ice on bottom of 35cm of foam insert. The foam was left out for a day in attempt to allow it to thaw but it remained frozen at 2.510m, preventing depth to bottom reading; water above ice at 2.450m.
- Staff gauge boards at both D3 and D4 have shifted (possibly due to ice); should be re-secured and surveyed in.

**Figure 1: Logger cable at D4, broken apart, with animal chew marks visible.**

**Figure 2: TH-GD-05 with a crack in the metal casing visible in the middle of the picture. Water leaked through after the PVC standpipe was opened, but stopped leaking after the PVC standpipe was re-sealed.**

**Figure 3: 15-RD-05, showing damaged lower standpipe. The foam insert could not be removed further due to damage to standpipe below.**

**Figure 4: 15-RD-02, showing leaking casing and wet ground around well.**

**Figure 5: 15-RD-01, showing broken standpipe; obstruction also present at 1.497 m.**

## Guidelines & Objectives

### Sample Parameter Qualifier key listed:

Qualifier	Description
HTC	Hardness was calculated from Total Ca and/or Mg concentrations and may be biased high (dissolved Ca/Mg results unavailable).
DLM	Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).

### Health Canada MAC Health Related Criteria Limits

Nitrate/Nitrite-N*	Criteria limit is 10 mg/L (1.0 mg/L if present as all Nitrite-N). High concentrations may contribute to blue baby syndrome in infants.
Lead*	A cumulative body poison, uncommon in naturally occurring hard waters.
Fluoride*	Present in fluoridated water supplies at 0.8 mg/L to reduce dental caries. Elevated levels causes fluorosis (mottling of teeth).
Total Coliforms*	Criteria is 0 CFU/100mL. Adverse health effects.
E. Coli*	Criteria is 0 CFU/100 mL. Certain E. Coli bacteria can be life threatening.

\*Health Canada Canadian Drinking Water Quality Guidelines (MAC limit)

### Aesthetic Objective Concentration Levels

Alkalinity	Acid neutralizing capacity. Usually a measure of carbonate and bicarbonates and calculated and reported as calcium carbonate.
Balance	Quality control parameter ratioing cations to anions
Bicarbonate	See Alkalinity. Report as the anion HCO <sub>3</sub> -1
Carbonate	See Alkalinity. Reported at the anion CO <sub>3</sub> -2
Calcium	See Hardness. Common major cation of water chemistry.
Chloride	Common major anion of water chemistry.
Conductance	Physical test measuring water salinity (dissolved ions or solids)
Hardness	Classical measure or capacity of water to precipitate soap (chiefly calcium and magnesium ions). Causes scaling tendency in water if carbonates/bicarbonates are present (if >200 mg/L). For drinking water purposes waters with results <200 mg/L are considered acceptable, results >200 mg/L are considered poor but can be tolerated. Results >500 mg/L are unacceptable.
Hydroxide	See alkalinity
Magnesium	See hardness. Common major cation of water chemistry. Elevated levels (>125 mg/L) may exert a cathartic or diuretic action.
pH	Measure of water acidity/alkalinity. Normal range is 7.0-8.5.
Potassium	Common major cation of water chemistry.
Sodium	Common major cation of water chemistry. Measure of salinity (saltiness). The aesthetic objective (not related to health) for sodium in drinking water is 200 mg/L. However, where sodium concentration of the drinking water exceeds 20 mg/L, it is recommended that any person on a sodium restricted diet consult with his/her physician or Medical Officer of Health concerning the use of that water.
Sulphate	Common major anion of water chemistry. Elevated levels may exert a cathartic or diuretic action.
Total Dissolved Solids	A measure of water salinity.
Iron	Causes staining to laundry and porcelain and astringent taste. Oxidizes to red-brown precipitate on exposure to air.
Manganese	Elevated levels may cause staining of laundry and porcelain.
Heterotrophic Plate Count	Criteria is 500 cfu/mL Measure of heterotrophic bacteria present.

### GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.

mg/kg - milligrams per kilogram based on dry weight of sample

mg/kg wwt - milligrams per kilogram based on wet weight of sample

mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight

mg/L - unit of concentration based on volume, parts per million.

< - Less than.

D.L. - The reporting limit.

N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.

UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

## Legend & Qualifier Definitions:

- EHTR-FM: Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended.
- EHTR: Exceeded ALS recommended hold time prior to sample receipt.
- EHTL: Exceeded ALS recommended hold time prior to analysis. Sample was received less than 24 hours prior to expiry.
- EHT: Exceeded ALS recommended hold time prior to analysis.
- Rec. HT: ALS recommended hold time (see units).

### Notes\*:

Where actual sampling date is not provided to ALS, the date (& time) of receipt is used for calculation purposes.  
Where actual sampling time is not provided to ALS, the earlier of 12 noon on the sampling date or the time (& date) of receipt is used for calculation purposes. Samples for L1931744 were received on 26-MAY-17 08:00.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

**CDWQG = Health Canada Guideline Limits updated MAY 2018**

\* CDWQG for Nitrate+Nitrite-N is the limit for nitrate only. If present as Nitrate then the limit is 10mg/L < or N.D. = less than detection limit.  
 \* Turbidity guideline based on membrane filtration. For guidelines on conventional treatment and slow sand or diatomaceous earth filtration please see Summary Table of Guidelines for Canadian Drinking Water Quality  
 - A blank entry designates no known limit.  
 - A shaded value in the Results column exceeds CDWQG MAC and/ or Aesthetic Objective.

5-JUL-2018 Revised report - Full metals scan reporting

## Guidelines & Objectives

### Health Canada MAC Health Related Criteria Limits

Nitrate/Nitrite-N*	Criteria limit is 10 mg/L (1.0 mg/L if present as all Nitrite-N). High concentrations may contribute to blue baby syndrome in infants.
Lead*	A cumulative body poison, uncommon in naturally occurring hard waters.
Fluoride*	Present in fluoridated water supplies at 0.8 mg/L to reduce dental caries. Elevated levels causes fluorosis (mottling of teeth).
Total Coliforms*	Criteria is 0 CFU/100mL. Adverse health effects.
E. Coli*	Criteria is 0 CFU/100 mL. Certain E. Coli bacteria can be life threatening.

\*Health Canada Canadian Drinking Water Quality Guidelines (MAC limit)

### Aesthetic Objective Concentration Levels

Alkalinity	Acid neutralizing capacity. Usually a measure of carbonate and bicarbonates and calculated and reported as calcium carbonate.
Balance	Quality control parameter ratioing cations to anions
Bicarbonate	See Alkalinity. Report as the anion HCO <sub>3</sub> -1
Carbonate	See Alkalinity. Reported at the anion CO <sub>3</sub> -2
Calcium	See Hardness. Common major cation of water chemistry.
Chloride	Common major anion of water chemistry.
Conductance	Physical test measuring water salinity (dissolved ions or solids)
Hardness	Classical measure or capacity of water to precipitate soap (chiefly calcium and magnesium ions). Causes scaling tendency in water if carbonates/bicarbonates are present (if >200 mg/L). For drinking water purposes waters with results <200 mg/L are considered acceptable, results >200 mg/L are considered poor but can be tolerated. Results >500 mg/L are unacceptable.
Hydroxide	See alkalinity
Magnesium	See hardness. Common major cation of water chemistry. Elevated levels (>125 mg/L) may exert a cathartic or diuretic action.
pH	Measure of water acidity/alkalinity. Normal range is 7.0-8.5.
Potassium	Common major cation of water chemistry.
Sodium	Common major cation of water chemistry. Measure of salinity (saltiness). The aesthetic objective (not related to health) for sodium in drinking water is 200 mg/L. However, where sodium concentration of the drinking water exceeds 20 mg/L, it is recommended that any person on a sodium restricted diet consult with his/her physician or Medical Officer of Health concerning the use of that water.
Sulphate	Common major anion of water chemistry. Elevated levels may exert a cathartic or diuretic action.
Total Dissolved Solids	A measure of water salinity.
Iron	Causes staining to laundry and porcelain and astringent taste. Oxidizes to red-brown precipitate on exposure to air.
Manganese	Elevated levels may cause staining of laundry and porcelain.
Heterotrophic Plate Count	Criteria is 500 cfu/mL Measure of heterotrophic bacteria present.

### GLOSSARY OF REPORT TERMS

*Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.*

*mg/kg - milligrams per kilogram based on dry weight of sample*

*mg/kg wwt - milligrams per kilogram based on wet weight of sample*

*mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight*

*mg/L - unit of concentration based on volume, parts per million.*

*< - Less than.*

*D.L. - The reporting limit.*

*N/A - Result not available. Refer to qualifier code and definition for explanation.*

*Test results reported relate only to the samples as received by the laboratory.*

*UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.*

*Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.*

Report Date: 05-JUL-18

Page 6 of 6

## Hold Time Exceedances:

ALS Product Description	Sample ID	Sampling Date	Date Processed	Rec. HT	Actual HT	Units	Qualifier
<b>Physical Tests</b>							
pH							
	1	23-MAY-17 14:45	26-MAY-17 12:00	0.25	69	hours	EHTR-FM
	2	23-MAY-17 15:30	26-MAY-17 12:00	0.25	68	hours	EHTR-FM
	3	23-MAY-17 08:47	26-MAY-17 12:00	0.25	75	hours	EHTR-FM
	4	23-MAY-17 15:25	26-MAY-17 12:00	0.25	69	hours	EHTR-FM
	5	23-MAY-17 16:45	26-MAY-17 12:00	0.25	67	hours	EHTR-FM
	6	25-MAY-17 13:15	26-MAY-17 12:00	0.25	23	hours	EHTR-FM

## Legend & Qualifier Definitions:

- EHTR-FM: Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended.  
EHTR: Exceeded ALS recommended hold time prior to sample receipt.  
EHTL: Exceeded ALS recommended hold time prior to analysis. Sample was received less than 24 hours prior to expiry.  
EHT: Exceeded ALS recommended hold time prior to analysis.  
Rec. HT: ALS recommended hold time (see units).

## Notes\*:

Where actual sampling date is not provided to ALS, the date (& time) of receipt is used for calculation purposes.

Where actual sampling time is not provided to ALS, the earlier of 12 noon on the sampling date or the time (& date) of receipt is used for calculation purposes. Samples for L1931757 were received on 26-MAY-17 08:00.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

<p><b>CDWQG = Health Canada Guideline Limits updated</b></p> <p>* CDWQG for Nitrate+Nitrite-N is the limit for nitrate only. If present as Nitrate then the limit is 10mg/L &lt; or N.D. = less than detection limit.            * Turbidity guideline based on membrane filtration. For guidelines on conventional treatment and slow sand or diatomaceous earth filtration please see Summary Table of Guidelines for Canadian Drinking Water Quality            - A blank entry designates no known limit.            - A shaded value in the Results column exceeds CDWQG MAC and/ or Aesthetic Objective.</p> <p>Approved by <u>&lt;Original signed by&gt;</u>            Hua Wo            Account Manager</p> <p>11-JUL-2018 AMENDED REPORT - Re-issued with complete total metal scan results</p>	<b>MAY 2018</b>

## Guidelines & Objectives

### Sample Parameter Qualifier key listed:

Qualifier	Description
HTC	Hardness was calculated from Total Ca and/or Mg concentrations and may be biased high (dissolved Ca/Mg results unavailable).
DLM	Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).

### Health Canada MAC Health Related Criteria Limits

Nitrate/Nitrite-N*	Criteria limit is 10 mg/L (1.0 mg/L if present as all Nitrite-N). High concentrations may contribute to blue baby syndrome in infants.
Lead*	A cumulative body poison, uncommon in naturally occurring hard waters.
Fluoride*	Present in fluoridated water supplies at 0.8 mg/L to reduce dental caries. Elevated levels causes fluorosis (mottling of teeth).
Total Coliforms*	Criteria is 0 CFU/100mL. Adverse health effects.
E. Coli*	Criteria is 0 CFU/100 mL. Certain E. Coli bacteria can be life threatening.

\*Health Canada Canadian Drinking Water Quality Guidelines (MAC limit)

### Aesthetic Objective Concentration Levels

Alkalinity	Acid neutralizing capacity. Usually a measure of carbonate and bicarbonates and calculated and reported as calcium carbonate.
Balance	Quality control parameter ratioing cations to anions
Bicarbonate	See Alkalinity. Report as the anion HCO <sub>3</sub> -1
Carbonate	See Alkalinity. Reported at the anion CO <sub>3</sub> -2
Calcium	See Hardness. Common major cation of water chemistry.
Chloride	Common major anion of water chemistry.
Conductance	Physical test measuring water salinity (dissolved ions or solids)
Hardness	Classical measure or capacity of water to precipitate soap (chiefly calcium and magnesium ions). Causes scaling tendency in water if carbonates/bicarbonates are present (if >200 mg/L). For drinking water purposes waters with results <200 mg/L are considered acceptable, results >200 mg/L are considered poor but can be tolerated. Results >500 mg/L are unacceptable.
Hydroxide	See alkalinity
Magnesium	See hardness. Common major cation of water chemistry. Elevated levels (>125 mg/L) may exert a cathartic or diuretic action.
pH	Measure of water acidity/alkalinity. Normal range is 7.0-8.5.
Potassium	Common major cation of water chemistry.
Sodium	Common major cation of water chemistry. Measure of salinity (saltiness). The aesthetic objective (not related to health) for sodium in drinking water is 200 mg/L. However, where sodium concentration of the drinking water exceeds 20 mg/L, it is recommended that any person on a sodium restricted diet consult with his/her physician or Medical Officer of Health concerning the use of that water.
Sulphate	Common major anion of water chemistry. Elevated levels may exert a cathartic or diuretic action.
Total Dissolved Solids	A measure of water salinity.
Iron	Causes staining to laundry and porcelain and astringent taste. Oxidizes to red-brown precipitate on exposure to air.
Manganese	Elevated levels may cause staining of laundry and porcelain.
Heterotrophic Plate Count	Criteria is 500 cfu/mL Measure of heterotrophic bacteria present.

### GLOSSARY OF REPORT TERMS

*Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.*

*mg/kg - milligrams per kilogram based on dry weight of sample*

*mg/kg wwt - milligrams per kilogram based on wet weight of sample*

*mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight*

*mg/L - unit of concentration based on volume, parts per million.*

*< - Less than.*

*D.L. - The reporting limit.*

*N/A - Result not available. Refer to qualifier code and definition for explanation.*

*Test results reported relate only to the samples as received by the laboratory.*

*UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.*

*Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.*

# Quality Control Report

Workorder: L1969989

Report Date: 11-JUL-18

Page 9 of 10

## Legend:

---

Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

## Sample Parameter Qualifier Definitions:

---

Qualifier	Description
B	Method Blank exceeds ALS DQO. Associated sample results which are < Limit of Reporting or > 5 times blank level are considered reliable.
J	Duplicate results and limits are expressed in terms of absolute difference.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

---

## Legend & Qualifier Definitions:

EHTR-FM:	Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended.
EHTR:	Exceeded ALS recommended hold time prior to sample receipt.
EHTL:	Exceeded ALS recommended hold time prior to analysis. Sample was received less than 24 hours prior to expiry.
EHT:	Exceeded ALS recommended hold time prior to analysis.
Rec. HT:	ALS recommended hold time (see units).

### Notes\*:

Where actual sampling date is not provided to ALS, the date (& time) of receipt is used for calculation purposes.  
Where actual sampling time is not provided to ALS, the earlier of 12 noon on the sampling date or the time (& date) of receipt is used for calculation purposes. Samples for L1969989 were received on 04-AUG-17 08:00.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

<b>Alkalinity, Total (as CaCO3)</b>						
Alkalinity, Total (as CaCO3)	321		mg/L			05-AUG-17
<b>CDWQG = Health Canada Guideline Limits updated MAY 2018</b>						
* CDWQG for Nitrate+Nitrite-N is the limit for nitrate only. If present as Nitrate then the limit is 10mg/L < or N.D. = less than detection limit.						
* Turbidity guideline based on membrane filtration. For guidelines on conventional treatment and slow sand or diatomaceous earth filtration please see Summary Table of Guidelines for Canadian Drinking Water Quality						
- A blank entry designates no known limit.						
- A shaded value in the Results column exceeds CDWQG MAC and/ or Aesthetic Objective.

Test Description	Result	Qualifier	Units of Measure	CDWQG MAC	Aesthetic Objective	Date Analyzed
11-JUL-2018 AMENDED REPORT - Report re-issued	with complete dissolved metals results					

## Guidelines & Objectives

### Health Canada MAC Health Related Criteria Limits

Nitrate/Nitrite-N*	Criteria limit is 10 mg/L (1.0 mg/L if present as all Nitrite-N). High concentrations may contribute to blue baby syndrome in infants.
Lead*	A cumulative body poison, uncommon in naturally occurring hard waters.
Fluoride*	Present in fluoridated water supplies at 0.8 mg/L to reduce dental caries. Elevated levels causes fluorosis (mottling of teeth).
Total Coliforms*	Criteria is 0 CFU/100mL. Adverse health effects.
E. Coli*	Criteria is 0 CFU/100 mL. Certain E. Coli bacteria can be life threatening.

\*Health Canada Canadian Drinking Water Quality Guidelines (MAC limit)

### Aesthetic Objective Concentration Levels

Alkalinity	Acid neutralizing capacity. Usually a measure of carbonate and bicarbonates and calculated and reported as calcium carbonate.
Balance	Quality control parameter ratioing cations to anions
Bicarbonate	See Alkalinity. Report as the anion HCO <sub>3</sub> -1
Carbonate	See Alkalinity. Reported at the anion CO <sub>3</sub> -2
Calcium	See Hardness. Common major cation of water chemistry.
Chloride	Common major anion of water chemistry.
Conductance	Physical test measuring water salinity (dissolved ions or solids)
Hardness	Classical measure or capacity of water to precipitate soap (chiefly calcium and magnesium ions). Causes scaling tendency in water if carbonates/bicarbonates are present (if >200 mg/L). For drinking water purposes waters with results <200 mg/L are considered acceptable, results >200 mg/L are considered poor but can be tolerated. Results >500 mg/L are unacceptable.
Hydroxide	See alkalinity
Magnesium	See hardness. Common major cation of water chemistry. Elevated levels (>125 mg/L) may exert a cathartic or diuretic action.
pH	Measure of water acidity/alkalinity. Normal range is 7.0-8.5.
Potassium	Common major cation of water chemistry.
Sodium	Common major cation of water chemistry. Measure of salinity (saltiness). The aesthetic objective (not related to health) for sodium in drinking water is 200 mg/L. However, where sodium concentration of the drinking water exceeds 20 mg/L, it is recommended that any person on a sodium restricted diet consult with his/her physician or Medical Officer of Health concerning the use of that water.
Sulphate	Common major anion of water chemistry. Elevated levels may exert a cathartic or diuretic action.
Total Dissolved Solids	A measure of water salinity.
Iron	Causes staining to laundry and porcelain and astringent taste. Oxidizes to red-brown precipitate on exposure to air.
Manganese	Elevated levels may cause staining of laundry and porcelain.
Heterotrophic Plate Count	Criteria is 500 cfu/mL Measure of heterotrophic bacteria present.

### GLOSSARY OF REPORT TERMS

*Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.*

*mg/kg - milligrams per kilogram based on dry weight of sample*

*mg/kg wwt - milligrams per kilogram based on wet weight of sample*

*mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight*

*mg/L - unit of concentration based on volume, parts per million.*

*< - Less than.*

*D.L. - The reporting limit.*

*N/A - Result not available. Refer to qualifier code and definition for explanation.*

*Test results reported relate only to the samples as received by the laboratory.*

*UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.*

*Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.*

## Legend & Qualifier Definitions:

EHTR-FM: Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended.  
EHTR: Exceeded ALS recommended hold time prior to sample receipt.  
EHTL: Exceeded ALS recommended hold time prior to analysis. Sample was received less than 24 hours prior to expiry.  
EHT: Exceeded ALS recommended hold time prior to analysis.  
Rec. HT: ALS recommended hold time (see units).

## Notes\*:

Where actual sampling date is not provided to ALS, the date (& time) of receipt is used for calculation purposes.  
Where actual sampling time is not provided to ALS, the earlier of 12 noon on the sampling date or the time (& date) of receipt is used for calculation purposes. Samples for L1970036 were received on 04-AUG-17 08:00.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

<b>CDWQG = Health Canada Guideline Limits updated MAY 2018</b>						
<p>* CDWQG for Nitrate+Nitrite-N is the limit for nitrate only. If present as Nitrate then the limit is 10mg/L &lt; or N.D. = less than detection limit.            * Turbidity guideline based on membrane filtration. For guidelines on conventional treatment and slow sand or diatomaceous earth filtration please see Summary Table of Guidelines for Canadian Drinking Water Quality            - A blank entry designates no known limit.            - A shaded value in the Results column exceeds CDWQG MAC and/ or Aesthetic Objective.</p>

11-JUL-2018 AMENDED REPORT - Report re-issued	with complete dissolved metals scan results					

## Guidelines & Objectives

### Health Canada MAC Health Related Criteria Limits

Nitrate/Nitrite-N*	Criteria limit is 10 mg/L (1.0 mg/L if present as all Nitrite-N). High concentrations may contribute to blue baby syndrome in infants.
Lead*	A cumulative body poison, uncommon in naturally occurring hard waters.
Fluoride*	Present in fluoridated water supplies at 0.8 mg/L to reduce dental caries. Elevated levels causes fluorosis (mottling of teeth).
Total Coliforms*	Criteria is 0 CFU/100mL. Adverse health effects.
E. Coli*	Criteria is 0 CFU/100 mL. Certain E. Coli bacteria can be life threatening.

\*Health Canada Canadian Drinking Water Quality Guidelines (MAC limit)

### Aesthetic Objective Concentration Levels

Alkalinity	Acid neutralizing capacity. Usually a measure of carbonate and bicarbonates and calculated and reported as calcium carbonate.
Balance	Quality control parameter ratioing cations to anions
Bicarbonate	See Alkalinity. Report as the anion HCO <sub>3</sub> -1
Carbonate	See Alkalinity. Reported at the anion CO <sub>3</sub> -2
Calcium	See Hardness. Common major cation of water chemistry.
Chloride	Common major anion of water chemistry.
Conductance	Physical test measuring water salinity (dissolved ions or solids)
Hardness	Classical measure or capacity of water to precipitate soap (chiefly calcium and magnesium ions). Causes scaling tendency in water if carbonates/bicarbonates are present (if >200 mg/L). For drinking water purposes waters with results <200 mg/L are considered acceptable, results >200 mg/L are considered poor but can be tolerated. Results >500 mg/L are unacceptable.
Hydroxide	See alkalinity
Magnesium	See hardness. Common major cation of water chemistry. Elevated levels (>125 mg/L) may exert a cathartic or diuretic action.
pH	Measure of water acidity/alkalinity. Normal range is 7.0-8.5.
Potassium	Common major cation of water chemistry.
Sodium	Common major cation of water chemistry. Measure of salinity (saltiness). The aesthetic objective (not related to health) for sodium in drinking water is 200 mg/L. However, where sodium concentration of the drinking water exceeds 20 mg/L, it is recommended that any person on a sodium restricted diet consult with his/her physician or Medical Officer of Health concerning the use of that water.
Sulphate	Common major anion of water chemistry. Elevated levels may exert a cathartic or diuretic action.
Total Dissolved Solids	A measure of water salinity.
Iron	Causes staining to laundry and porcelain and astringent taste. Oxidizes to red-brown precipitate on exposure to air.
Manganese	Elevated levels may cause staining of laundry and porcelain.
Heterotrophic Plate Count	Criteria is 500 cfu/mL Measure of heterotrophic bacteria present.

### GLOSSARY OF REPORT TERMS

*Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.*

*mg/kg - milligrams per kilogram based on dry weight of sample*

*mg/kg wwt - milligrams per kilogram based on wet weight of sample*

*mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight*

*mg/L - unit of concentration based on volume, parts per million.*

*< - Less than.*

*D.L. - The reporting limit.*

*N/A - Result not available. Refer to qualifier code and definition for explanation.*

*Test results reported relate only to the samples as received by the laboratory.*

*UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.*

*Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.*

# Quality Control Report

Workorder: L2003340

Report Date: 11-JUL-18

Page 6 of 7

## Legend:

---

Limit	ALS Control Limit (Data Quality Objectives)
DUP	Duplicate
RPD	Relative Percent Difference
N/A	Not Available
LCS	Laboratory Control Sample
SRM	Standard Reference Material
MS	Matrix Spike
MSD	Matrix Spike Duplicate
ADE	Average Desorption Efficiency
MB	Method Blank
IRM	Internal Reference Material
CRM	Certified Reference Material
CCV	Continuing Calibration Verification
CVS	Calibration Verification Standard
LCSD	Laboratory Control Sample Duplicate

## Sample Parameter Qualifier Definitions:

---

Qualifier	Description
J	Duplicate results and limits are expressed in terms of absolute difference.
MS-B	Matrix Spike recovery could not be accurately calculated due to high analyte background in sample.
RPD-NA	Relative Percent Difference Not Available due to result(s) being less than detection limit.

---

# Quality Control Report

Workorder: L2003340

Report Date: 11-JUL-18

Page 7 of 7

## Hold Time Exceedances:

ALS Product Description	Sample ID	Sampling Date	Date Processed	Rec. HT	Actual HT	Units	Qualifier
<b>Physical Tests</b>							
pH							
	1	04-OCT-17 16:30	06-OCT-17 12:00	0.25	43	hours	EHTR-FM
	2	03-OCT-17 13:45	06-OCT-17 12:00	0.25	70	hours	EHTR-FM
	3	03-OCT-17 14:30	06-OCT-17 12:00	0.25	70	hours	EHTR-FM
	4	04-OCT-17 14:30	06-OCT-17 12:00	0.25	46	hours	EHTR-FM
	5	04-OCT-17 13:50	06-OCT-17 12:00	0.25	46	hours	EHTR-FM
	6	04-OCT-17 09:15	06-OCT-17 12:00	0.25	51	hours	EHTR-FM
	7	03-OCT-17 13:45	06-OCT-17 12:00	0.25	70	hours	EHTR-FM

## Legend & Qualifier Definitions:

EHTR-FM: Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended.  
EHTR: Exceeded ALS recommended hold time prior to sample receipt.  
EHTL: Exceeded ALS recommended hold time prior to analysis. Sample was received less than 24 hours prior to expiry.  
EHT: Exceeded ALS recommended hold time prior to analysis.  
Rec. HT: ALS recommended hold time (see units).

### Notes\*:

Where actual sampling date is not provided to ALS, the date (& time) of receipt is used for calculation purposes.  
Where actual sampling time is not provided to ALS, the earlier of 12 noon on the sampling date or the time (& date) of receipt is used for calculation purposes. Samples for L2003340 were received on 06-OCT-17 08:00.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

## Guidelines & Objectives

### Sample Parameter Qualifier key listed:

Qualifier	Description
HTC	Hardness was calculated from Total Ca and/or Mg concentrations and may be biased high (dissolved Ca/Mg results unavailable).
DLM	Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).

### Health Canada MAC Health Related Criteria Limits

Nitrate/Nitrite-N*	Criteria limit is 10 mg/L (1.0 mg/L if present as all Nitrite-N). High concentrations may contribute to blue baby syndrome in infants.
Lead*	A cumulative body poison, uncommon in naturally occurring hard waters.
Fluoride*	Present in fluoridated water supplies at 0.8 mg/L to reduce dental caries. Elevated levels causes fluorosis (mottling of teeth).
Total Coliforms*	Criteria is 0 CFU/100mL. Adverse health effects.
E. Coli*	Criteria is 0 CFU/100 mL. Certain E. Coli bacteria can be life threatening.

\*Health Canada Canadian Drinking Water Quality Guidelines (MAC limit)

### Aesthetic Objective Concentration Levels

Alkalinity	Acid neutralizing capacity. Usually a measure of carbonate and bicarbonates and calculated and reported as calcium carbonate.
Balance	Quality control parameter ratioing cations to anions
Bicarbonate	See Alkalinity. Report as the anion HCO <sub>3</sub> -1
Carbonate	See Alkalinity. Reported at the anion CO <sub>3</sub> -2
Calcium	See Hardness. Common major cation of water chemistry.
Chloride	Common major anion of water chemistry.
Conductance	Physical test measuring water salinity (dissolved ions or solids)
Hardness	Classical measure or capacity of water to precipitate soap (chiefly calcium and magnesium ions). Causes scaling tendency in water if carbonates/bicarbonates are present (if >200 mg/L). For drinking water purposes waters with results <200 mg/L are considered acceptable, results >200 mg/L are considered poor but can be tolerated. Results >500 mg/L are unacceptable.
Hydroxide	See alkalinity
Magnesium	See hardness. Common major cation of water chemistry. Elevated levels (>125 mg/L) may exert a cathartic or diuretic action.
pH	Measure of water acidity/alkalinity. Normal range is 7.0-8.5.
Potassium	Common major cation of water chemistry.
Sodium	Common major cation of water chemistry. Measure of salinity (saltiness). The aesthetic objective (not related to health) for sodium in drinking water is 200 mg/L. However, where sodium concentration of the drinking water exceeds 20 mg/L, it is recommended that any person on a sodium restricted diet consult with his/her physician or Medical Officer of Health concerning the use of that water.
Sulphate	Common major anion of water chemistry. Elevated levels may exert a cathartic or diuretic action.
Total Dissolved Solids	A measure of water salinity.
Iron	Causes staining to laundry and porcelain and astringent taste. Oxidizes to red-brown precipitate on exposure to air.
Manganese	Elevated levels may cause staining of laundry and porcelain.
Heterotrophic Plate Count	Criteria is 500 cfu/mL Measure of heterotrophic bacteria present.

### GLOSSARY OF REPORT TERMS

*Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.*

*mg/kg - milligrams per kilogram based on dry weight of sample*

*mg/kg wwt - milligrams per kilogram based on wet weight of sample*

*mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight*

*mg/L - unit of concentration based on volume, parts per million.*

*< - Less than.*

*D.L. - The reporting limit.*

*N/A - Result not available. Refer to qualifier code and definition for explanation.*

*Test results reported relate only to the samples as received by the laboratory.*

*UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.*

*Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.*

## Legend & Qualifier Definitions:

EHTR-FM:	Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended.
EHTR:	Exceeded ALS recommended hold time prior to sample receipt.
EHTL:	Exceeded ALS recommended hold time prior to analysis. Sample was received less than 24 hours prior to expiry.
EHT:	Exceeded ALS recommended hold time prior to analysis.
Rec. HT:	ALS recommended hold time (see units).

### Notes\*:

Where actual sampling date is not provided to ALS, the date (& time) of receipt is used for calculation purposes.  
Where actual sampling time is not provided to ALS, the earlier of 12 noon on the sampling date or the time (& date) of receipt is used for calculation purposes. Samples for L2003343 were received on 06-OCT-17 08:00.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

19-JUN-2018 AMENDED REPORT - Complete ICP-MS Scan results reported for Dissolved Metals.						

## Guidelines & Objectives

### Sample Parameter Qualifier key listed:

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).

### Health Canada MAC Health Related Criteria Limits

Nitrate/Nitrite-N*	Criteria limit is 10 mg/L (1.0 mg/L if present as all Nitrite-N). High concentrations may contribute to blue baby syndrome in infants.
Lead*	A cumulative body poison, uncommon in naturally occurring hard waters.
Fluoride*	Present in fluoridated water supplies at 0.8 mg/L to reduce dental caries. Elevated levels causes fluorosis (mottling of teeth).
Total Coliforms*	Criteria is 0 CFU/100mL. Adverse health effects.
E. Coli*	Criteria is 0 CFU/100 mL. Certain E. Coli bacteria can be life threatening.

\*Health Canada Canadian Drinking Water Quality Guidelines (MAC limit)

### Aesthetic Objective Concentration Levels

Alkalinity	Acid neutralizing capacity. Usually a measure of carbonate and bicarbonates and calculated and reported as calcium carbonate.
Balance	Quality control parameter ratioing cations to anions
Bicarbonate	See Alkalinity. Report as the anion HCO <sub>3</sub> -1
Carbonate	See Alkalinity. Reported at the anion CO <sub>3</sub> -2
Calcium	See Hardness. Common major cation of water chemistry.
Chloride	Common major anion of water chemistry.
Conductance	Physical test measuring water salinity (dissolved ions or solids)
Hardness	Classical measure or capacity of water to precipitate soap (chiefly calcium and magnesium ions). Causes scaling tendency in water if carbonates/bicarbonates are present (if >200 mg/L). For drinking water purposes waters with results <200 mg/L are considered acceptable, results >200 mg/L are considered poor but can be tolerated. Results >500 mg/L are unacceptable.
Hydroxide	See alkalinity
Magnesium	See hardness. Common major cation of water chemistry. Elevated levels (>125 mg/L) may exert a cathartic or diuretic action.
pH	Measure of water acidity/alkalinity. Normal range is 7.0-8.5.
Potassium	Common major cation of water chemistry.
Sodium	Common major cation of water chemistry. Measure of salinity (saltiness).The aesthetic objective (not related to health) for sodium in drinking water is 200 mg/L. However, where sodium concentration of the drinking water exceeds 20 mg/L, it is recommended that any person on a sodium restricted diet consult with his/her physician or Medical Officer of Health concerning the use of that water.
Sulphate	Common major anion of water chemistry. Elevated levels may exert a cathartic or diuretic action.
Total Dissolved Solids	A measure of water salinity.
Iron	Causes staining to laundry and porcelain and astringent taste. Oxidizes to red-brown precipitate on exposure to air.
Manganese	Elevated levels may cause staining of laundry and porcelain.
Heterotrophic Plate Count	Criteria is 500 cfu/mL Measure of heterotrophic bacteria present.

### GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.

mg/kg - milligrams per kilogram based on dry weight of sample

mg/kg wwt - milligrams per kilogram based on wet weight of sample

mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight

mg/L - unit of concentration based on volume, parts per million.

< - Less than.

D.L. - The reporting limit.

N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.

UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

## Legend & Qualifier Definitions:

EHTR-FM:	Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended.
EHTR:	Exceeded ALS recommended hold time prior to sample receipt.
EHTL:	Exceeded ALS recommended hold time prior to analysis. Sample was received less than 24 hours prior to expiry.
EHT:	Exceeded ALS recommended hold time prior to analysis.
Rec. HT:	ALS recommended hold time (see units).

### Notes\*:

Where actual sampling date is not provided to ALS, the date (& time) of receipt is used for calculation purposes.

Where actual sampling time is not provided to ALS, the earlier of 12 noon on the sampling date or the time (& date) of receipt is used for calculation purposes. Samples for L2103324 were received on 31-MAY-18 07:45.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.

## Guidelines & Objectives

### Sample Parameter Qualifier key listed:

Qualifier	Description
HTC	Hardness was calculated from Total Ca and/or Mg concentrations and may be biased high (dissolved Ca/Mg results unavailable).
DLM	Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).

### Health Canada MAC Health Related Criteria Limits

Nitrate/Nitrite-N*	Criteria limit is 10 mg/L (1.0 mg/L if present as all Nitrite-N). High concentrations may contribute to blue baby syndrome in infants.
Lead*	A cumulative body poison, uncommon in naturally occurring hard waters.
Fluoride*	Present in fluoridated water supplies at 0.8 mg/L to reduce dental caries. Elevated levels causes fluorosis (mottling of teeth).
Total Coliforms*	Criteria is 0 CFU/100mL. Adverse health effects.
E. Coli*	Criteria is 0 CFU/100 mL. Certain E. Coli bacteria can be life threatening.

\*Health Canada Canadian Drinking Water Quality Guidelines (MAC limit)

### Aesthetic Objective Concentration Levels

Alkalinity	Acid neutralizing capacity. Usually a measure of carbonate and bicarbonates and calculated and reported as calcium carbonate.
Balance	Quality control parameter ratioing cations to anions
Bicarbonate	See Alkalinity. Report as the anion HCO <sub>3</sub> -1
Carbonate	See Alkalinity. Reported at the anion CO <sub>3</sub> -2
Calcium	See Hardness. Common major cation of water chemistry.
Chloride	Common major anion of water chemistry.
Conductance	Physical test measuring water salinity (dissolved ions or solids)
Hardness	Classical measure or capacity of water to precipitate soap (chiefly calcium and magnesium ions). Causes scaling tendency in water if carbonates/bicarbonates are present (if >200 mg/L). For drinking water purposes waters with results <200 mg/L are considered acceptable, results >200 mg/L are considered poor but can be tolerated. Results >500 mg/L are unacceptable.
Hydroxide	See alkalinity
Magnesium	See hardness. Common major cation of water chemistry. Elevated levels (>125 mg/L) may exert a cathartic or diuretic action.
pH	Measure of water acidity/alkalinity. Normal range is 7.0-8.5.
Potassium	Common major cation of water chemistry.
Sodium	Common major cation of water chemistry. Measure of salinity (saltiness). The aesthetic objective (not related to health) for sodium in drinking water is 200 mg/L. However, where sodium concentration of the drinking water exceeds 20 mg/L, it is recommended that any person on a sodium restricted diet consult with his/her physician or Medical Officer of Health concerning the use of that water.
Sulphate	Common major anion of water chemistry. Elevated levels may exert a cathartic or diuretic action.
Total Dissolved Solids	A measure of water salinity.
Iron	Causes staining to laundry and porcelain and astringent taste. Oxidizes to red-brown precipitate on exposure to air.
Manganese	Elevated levels may cause staining of laundry and porcelain.
Heterotrophic Plate Count	Criteria is 500 cfu/mL Measure of heterotrophic bacteria present.

### GLOSSARY OF REPORT TERMS

Surrogates are compounds that are similar in behaviour to target analyte(s), but that do not normally occur in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery. In reports that display the D.L. column, laboratory objectives for surrogates are listed there.

mg/kg - milligrams per kilogram based on dry weight of sample

mg/kg wwt - milligrams per kilogram based on wet weight of sample

mg/kg lwt - milligrams per kilogram based on lipid-adjusted weight

mg/L - unit of concentration based on volume, parts per million.

< - Less than.

D.L. - The reporting limit.

N/A - Result not available. Refer to qualifier code and definition for explanation.

Test results reported relate only to the samples as received by the laboratory.

UNLESS OTHERWISE STATED, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

Analytical results in unsigned test reports with the DRAFT watermark are subject to change, pending final QC review.

## Legend & Qualifier Definitions:

---

EHTR-FM:	Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended.
EHTR:	Exceeded ALS recommended hold time prior to sample receipt.
EHTL:	Exceeded ALS recommended hold time prior to analysis. Sample was received less than 24 hours prior to expiry.
EHT:	Exceeded ALS recommended hold time prior to analysis.
Rec. HT:	ALS recommended hold time (see units).

### Notes\*:

Where actual sampling date is not provided to ALS, the date (& time) of receipt is used for calculation purposes.  
Where actual sampling time is not provided to ALS, the earlier of 12 noon on the sampling date or the time (& date) of receipt is used for calculation purposes. Samples for L2103336 were received on 31-MAY-18 07:45.

ALS recommended hold times may vary by province. They are assigned to meet known provincial and/or federal government requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by the US EPA, APHA Standard Methods, or Environment Canada (where available). For more information, please contact ALS.

---

The ALS Quality Control Report is provided to ALS clients upon request. ALS includes comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against pre-determined data quality objectives to provide confidence in the accuracy of associated test results.

Please note that this report may contain QC results from anonymous Sample Duplicates and Matrix Spikes that do not originate from this Work Order.
