Executive Summary

Atlantic Mining NS Corp (AMNS), a wholly owned subsidiary of St. Barbara Ltd., is planning to develop the Fifteen Mile Stream Gold Project (the Project) located approximately 115 km east of Halifax, in Halifax County, in the province of Nova Scotia. A surface water quality baseline study was undertaken to support the Environmental Impact Statement (EIS) process.

The objective of the surface water quality baseline study is to establish the surface water quality conditions within the Project study area and receiving environment, prior to development. The quality of surface water bodies within and upstream of the Project study area were considered to record pre-Project water qualities, and the quality of surface water bodies situated downstream of the Project were considered to permit assessment and monitoring of potential Project related effects on the aquatic environment.

The surface water quality baseline monitoring program was initiated in July 2017 by McCallum Environmental. The current baseline surface water quality program comprises a total of 15 stations (14 watercourse monitoring locations and one lake profile location in Anti-Dam Flowage). Samples are collected quarterly (March, June, September, and December) to represent a range of hydrologic and environmental influences, including the late fall low flow period, late winter/early spring transition, and typical ice-free spring and summer flows. Field duplicate, field blank, and trip blank samples have been collected in addition to the analytical laboratory's internal quality assurance program.

Baseline surface water quality monitoring results are compared to the Canadian Council of Ministers of the Environment (CCME) Canadian Environmental Quality Guidelines (CEQG), Water Quality Guidelines for the Protection of Aquatic Life, and the Nova Scotia Environmental Quality Standards (NSEQS) for Surface Water (Table 3).

The baseline water quality at the 14 watercourse stations can be generally characterized as having acidic to sub-neutral pH typically below the CEQG. Concentrations of total aluminum were greater than the CEQG in all samples, and concentrations of total iron were greater than the CEQG in 18% of samples; exceedances of CEQG for these parameters appear to be a naturally occurring condition within the vicinity of the Fifteen Mile Stream study area. Concentrations of total arsenic were greater than the CEQG in 25% of samples. All samples collected at SW-4 had arsenic concentrations greater than the CEQG; this may be related to historical mining activities and wastes which predate the Project. Concentrations greater than the CEQG or NSEQS were noted for the following additional parameters at watercourse stations: total copper (2% of samples), dissolved zinc (10% of samples), total mercury (2% of samples), total lead (<1% of samples), and total manganese (<1% of samples).

The baseline water quality at the Ant-Dam Flowage lake profile station can be generally characterized as having acidic to sub-neutral pH below the CEQG and concentrations greater than the CEQG or NSEQS in at least one sample for the following parameters: total aluminum, total arsenic, and total iron. Metals concentrations are similar between the shallow and deep profile station samples, and no consistent differences over time have been identified.

A review of available QA/QC data from the laboratory and through evaluation of field duplicates and field blanks indicates analytical results to date to be of acceptable quality.

1.0 INTRODUCTION

Atlantic Mining NS Corp (AMNS), a wholly owned subsidiary of St. Barbara Ltd., is planning to develop the Fifteen Mile Stream Gold Project (the Project) located approximately 115 km east of Halifax, in Halifax County, in the province of Nova Scotia (Figure 1).

This factual report presents the results of the surface water quality baseline study, with the objective of supporting the Environmental Impact Statement (EIS) process.

1.1 Overview of the Fifteen Mile Stream Project

AMNS is planning to construct, operate, and eventually reclaim a new open pit gold mine within the Fifteen Mile Stream study area, which is defined by the red boundary noted on Figure 1. The quality of surface water bodies within and upstream of the Project study area were considered to record pre-Project water qualities, and the quality of surface water bodies situated downstream of the Project were considered to permit assessment and monitoring of potential Project related effects on the aquatic environment. The proposed site infrastructure layout is also presented in Figure 1, which may be refined as a result of ongoing consultation and engineering studies. The key Project components are expected to consist of:

- Open pit
- Tailings Management Facility
- Ore Stockpile
- Waste Rock Stockpile
- Till Stockpile
- Plant Site

These facilities will be supported by other infrastructure, as required, during the construction, operations, and closure of the Project.

2.0 OBJECTIVES

The objective of the surface water quality baseline study is to establish the surface water quality conditions within the Project study area and receiving environment, prior to development. In the context of this report, the term “baseline” is used to describe the existing conditions at reported surface water quality stations, as encountered during the time period of the surface water quality study.

The scope of work for the surface water quality baseline study is summarized as follows:

- 1) Compilation of surface water quality data and comparison to relevant water quality criteria for screening purposes only, to identify constituents of interest under baseline conditions.
- 2) Analysis and interpretation of surface water quality data to characterize the baseline conditions.

3.0 METHODOLOGY

3.1 Surface Water Quality Monitoring

Surface water quality baseline monitoring has been completed at numerous stations in the surface water environment, within or adjacent to the Project study area (Figure 2). Baseline water quality stations were selected with the objective of recording upstream, midstream, and downstream surface water quality in relation to the proposed mine infrastructure within local lakes, reservoirs, rivers, and streams.

Samples are collected quarterly (March, June, September, December) to represent a range of hydrologic and environmental influences, including the late fall low flow period, late winter/early spring transition, and typical ice-free spring and summer flows. The surface water samples are collected, shipped, and submitted under chain-of-custody to Maxxam Analytics, in Bedford, Nova Scotia, for analysis. Samples are submitted immediately after sample collection (i.e., same day) in order to meet the minimum hold times for laboratory analysis. The complete standard operating procedure for the Fifteen Mile Stream surface water monitoring program is presented in McCallum (2019).

The surface water quality program was initiated in July 2017. The baseline program originally entailed eight surface water stations (SW-1 to SW-8) that focused on analysis of routine general chemistry, total metals, and total mercury. The program expanded in the following quarter to include five supplementary stations (SW-9 to SW-13). In April 2018 routine analysis expanded to include dissolved mercury.

The monitoring program was revised in September 2018 to include supplementary monitoring stations (SW-14 and SW-16), a water column profile at the existing SW-13 location, and a more comprehensive list of analytical parameters.

The current baseline surface water quality program comprises a total of 15 stations. Fourteen of these locations monitor the surface water quality per quarter. One station (SW-13) encompasses a water quality profile with the objective of targeting deeper water in the Anti-Dam Flowage (reservoir) by obtaining field parameters at 1-meter intervals from surface to bottom depth and two water quality samples: one near lakebed (SW13-D) and one near-surface (SW13-S). Details on the surface water quality station locations are summarized in Table 1.

Table 1: Surface Water Quality Baseline Stations

Station	Waterbody Name	Station Description	UTM Northing (NAD83 Zone 20N)	UTM Easting (NAD83 Zone 20N)
East River/Sheet Harbour Watershed				
SW-1	Unnamed stream	Stream flows through the FMS Study Area before it converges with Fifteen Mile Stream.	4999553	537062
SW-2	Seloam Lake (outlet)	Seloam Lake is a headwater lake, upstream of the FMS Study Area, and one of the two options to receive the discharge of treated effluent.	5000001	538363
SW-3	Unnamed pond	Pond is within the FMS Study Area and the footprint of the proposed TMF.	4998181	539486
SW-4	Unnamed stream	Stream flows through the FMS Study Area and the proposed open pit footprint.	4998675	537353
SW-5	Seloam Brook	Brook flows through the northwest corner of the FMS Study Area and converges with surface water flows from the majority of the FMS Study Area.	4998993	535917
SW-6	Anti Dam Flowage (outlet)	Anti Dam Flowage Reservoir is downstream of the FMS Study Area and one of the two options to receive the discharge of treated effluent.	4994294	539624
SW-7	Unnamed stream	Small stream converges with Fifteen Mile Stream downstream of the FMS Study Area.	4998109	535437
SW-8	Fifteen Mile Stream	Reference station located to the northwest (upstream) of the FMS Study Area.	5000430	535081
SW-9	Seventeen Mile Stream	Reference station located to the northwest (upstream) of the FMS Study Area.	5002178	534552
SW-10	Grassy Lake	Reference station located to the northwest (upstream) of the FMS Study Area.	5003448	535003
SW-12	East Lake	Small lake located in the southeast corner of the FMS Study Area and downgradient of the proposed TMF footprint.	4997710	540507
SW-13	Anti-Dam Flowage (profile)	Anti Dam Flowage is downstream of the FMS Study Area and one of the two options to receive the discharge of treated effluent.	4994730	540241
SW-14	Fifteen Mile Stream	Stream is located west of the FMS Study Area and downstream of SW-5 and SW-7.	4998025	535409
SW-16	Seloam Brook	Station located NW of proposed site facilities.	4998633	536851
Moser River Watershed				
SW-11	Moser Lake	Reference lake located to east of the FMS Study Area and within a separate watershed (not expected to be influenced by the Project).	4999679	540996

3.2 Laboratory Analysis and QA/QC

Water samples are analysed by Maxxam Analytics for the parameters presented in Appendix A and Appendix B, excluding field measurements. Laboratory certificates are presented in Appendix C and include laboratory quality assurance reports for samples collected in 2017; laboratory quality assurance reports for samples collected in 2018 are not available. Laboratory quality assurance reporting identifies data with respect to the following thresholds:

- Matrix spike values within range of 80 to 120%
- Spiked blank values within range of 80 to 120%
- Method blank values less than twice the method detection limit
- Relative percent difference (RPD) values less than 20%

Of the seventy-five sample results in the baseline water quality study with laboratory quality assurance reports, all laboratory reported quality assurance data met the criteria described above.

QA/QC procedures are in place for sampling, shipment, and laboratory analyses (lab certificates). The QA/QC procedure has been increased by the addition of field duplicate and field blank samples in September 2018, and trip blanks in March 2019. Field duplicate and field blank samples are presented in Appendix B and evaluated with respect to the RPD and method blank criteria described above, respectively; with key results summarized as follows:

- RPD between a duplicate sample and the corresponding normal sample exceeded 20% for a single parameter in each duplicate sample in September (turbidity) and December (dissolved manganese) 2018. The two duplicate samples and their corresponding normal samples collected in March 2019 contained RPD values greater than 20% for one to two parameters in each sample (TDS in both samples and methylmercury at SW1). The two duplicate samples and their corresponding normal samples collected in June 2019 contained RPD values greater than 20% for one to three parameters in each sample (TDS, dissolved aluminum, dissolved manganese, and methylmercury).
- A total of eight field blank samples were submitted, and nine parameter results were reported at concentrations greater than twice the method detection limit. Three of the results were reported for dissolved sodium, while no other parameter exceeded field blank criteria more than once. Each field blank reported between zero to three, results in excess of the field blank criteria. All field blank results greater than twice the method detection limit were less than ten times the method detection limit, with the exception of dissolved organic carbon in March 2019 field blank #2.
- A total of six trip blank samples were submitted, and three parameter results (turbidity, conductivity, and total aluminum) were reported at concentrations greater than twice the method detection limit. Two of these results occurred in March 2019 trip blank #1, while the other result occurred in June 2019 trip blank #2. Dissolved metals were not analysed in the trip blanks. All trip blank results greater than twice the method detection limit were less than ten times the method detection limit.
- All other QA/QC values met evaluation criteria.

In summary, review of available QA/QC data from the laboratory and through evaluation of field duplicates and field blanks indicates analytical results to date to be of acceptable quality. The existing QA/QC program is based on preliminary data collection and will be enhanced with additional sampling events.

4.0 RESULTS

4.1 Comparison Criteria

The results of the baseline surface water quality study are compared to the following criteria, applicable to the Project location for freshwater, non-potable purposes:

- Canadian Council of Ministers of the Environment (CCME 1999, updated in 2018). Canadian Environmental Quality Guidelines (CEQG), Water Quality Guidelines for the Protection of Aquatic Life.
- Nova Scotia Environmental Quality Standards for Surface Water, Table 3 (2013).

For parameters where the criteria are dependent on pH and hardness, guidelines were calculated as per the method outlined by CCME (2018).

The complete analyte list and comparison criteria for surface water quality are provided in Appendix A.

It should be noted that these criteria are used in this baseline report for screening purposes only, to identify constituents which may require further evaluation and are not related to surface water quality effects or impact assessment.

4.2 Surface Water Quality

Section 4.2.1 and 4.2.2 summarize the surface water quality results available as of the end of July 2019. The current data set does not provide sufficient data points to statistically evaluate seasonal influences. Surface water quality monitoring is on-going and future updates may permit increased interpretation of seasonal influences.

4.2.1 Watercourse Stations

Surface water quality results for samples collected by McCallum Environmental in 2017 through 2019 are presented in Appendix A and summarized in Table 2. Certain general parameters, major ions, dissolved metals, and methylmercury have only been reported for four sampling events (September 2018 through June 2019).

Based on results reported as of July 2019, the surface water quality can be characterized as:

- Acidic to sub-neutral pH values, with approximately 95% of field pH and 96% of lab pH values not meeting the chronic CEQG (6.5 – 9.0). The lowest pH (3.2) was observed in laboratory measurements from the sample collected at SW-11 in October 2017. Acidic pH values are spatially well distributed across all stations and appear to be a naturally occurring condition of surface water within the vicinity of the Fifteen Mile Stream study area.

- All total aluminum concentrations were greater than chronic CEQG (pH dependant, 0.10 – 0.0050 mg/L) and NSEQS (0.0050 mg/L). The maximum concentration (0.38 mg/L) was observed at SW-12 in July 2018. Total aluminum concentrations are spatially well distributed across all stations and appear to be a naturally occurring condition of surface water within the vicinity of the Fifteen Mile Stream study area.
- Approximately 35% of total arsenic concentrations were greater than chronic CEQG (0.0050 mg/L) and NSEQS (0.0050 mg/L); the concentrations greater than the chronic CEQG and NSEQS occur at stations SW-4, SW-5, SW-6, SW-13, SW-14, and SW-16. 100% of samples at SW-4 exceed the total arsenic criteria. The maximum concentration (0.34 mg/L) was observed at SW-4 in September 2018. Golder understands that arsenic concentrations in surface water bodies may be related to historical mining activities and wastes which predate the Project.
- Approximately 2% of total copper concentrations were greater than chronic CEQG (0.002 mg/L). The maximum concentration (0.0089 mg/L) was observed at SW-1 in March 2019.
- Approximately 18% of total iron concentrations were greater than chronic CEQG (0.30 mg/L) and NSEQS (0.30 mg/L). The maximum concentration (4.8 mg/L) was observed at SW-4 in September 2018. Total iron values above guidelines are spatially well distributed both upstream and downstream of the Fifteen Mile Stream study area and appear to be a naturally occurring condition.
- Of the six instances in which dissolved zinc concentrations were greater than the chronic CEQG (0.0070 mg/L), four of these samples contained dissolved zinc concentrations greater than twice the reported value for total zinc (the total zinc result was below detection limit in all five instances). However, these dissolved values are reported at concentrations within three times the method detection limit, and this variability is within acceptable ranges. Including the suspect results, approximately 10% of dissolved zinc concentrations were greater than chronic CEQG (0.0070 mg/L). The maximum concentration (0.018 mg/L) was observed at SW-8 in March 2019.
- Approximately 2% of total mercury concentrations were greater than chronic CEQG (0.000026 mg/L); the concentrations greater than the chronic CEQG were observed at SW-4. The maximum concentration (0.000030 mg/L) was observed at SW-4 in July 2017.
- Values of total lead and total manganese were greater than applicable chronic CEQG or NSEQS criteria in a single sample (i.e., less than 1% of all samples analysed). Both values occurred in samples collected from SW-4 and were less than twice the applicable chronic CEQG or NSEQS criteria value.
- Concentrations of all other parameters analyzed were less than the CEQGs and NSEQS.

Table 2: Summary of Surface Water Quality Data Comparisons to Criteria

Parameter	Criteria (mg/L)		Number of Samples	Samples Values not Meeting Criteria		Location
	CEQG Chronic ¹	NSEQS ²		CEQG Chronic ¹	NSEQS ²	
Field pH	6.5 – 9.0	-	111	n=105 95%	-	All Stations
Lab pH	6.5 – 9.0	-	120	n=115 96%	-	All Stations
Total Aluminum	0.10 - 0.0050 ³	0.0050	120	n=120 100%	n=120 100%	All Stations
Total Arsenic	0.0050	0.0050	120	n=22 18%	n=22 18%	SW-4, SW-5, SW-6, SW-14
Total Copper	0.002 ³	0.002	120	n=2 2%	n=2 2%	SW-1, SW-4
Total Iron	0.30	0.30	120	n=42 35%	n=42 35%	SW-1, SW-4, SW-5, SW-6, SW-7, SW-8, SW-10, SW-11, SW-12, SW-13, SW-14
Total Lead	0.0010	0.0010	120	n=1 1%	n=1 1%	SW-4
Total Manganese	-	0.82	120	-	n=1 1%	SW-4
Dissolved Zinc	0.0070	-	61	n=6 ⁴ 10%	-	SW-1, SW-4, SW-8, SW-14
Total Mercury	0.000026	0.000026	120	n=2 2%	n=2 2%	SW-4

Notes:

1. Canadian Council of Ministers of the Environment (1999, updated in 2018). Canadian Environmental Quality Guidelines (CEQG) for the Protection of Aquatic Life.
2. Nova Scotia Environmental Quality Standards for Surface Water, Table 3 (2013).
3. Criteria varies with pH or hardness.
4. Four of six values are suspect, due to the dissolved zinc concentration reported at greater than 2x the total zinc concentration.

4.2.2 Lake Profile Stations

In September 2018, the SW-13 monitoring location was revised and became a water quality profile station (results prior to September 2018 are discussed in Section 4.2.1). Field parameters were taken at 1-meter intervals from surface to bottom depth and two samples obtained from the station location, one near lakebed sample (SW13-D) and one near-surface sample (SW13-S).

Both SW13-S and SW13-D are characterized by similar water quality for the four collection rounds. All samples are characterized by acidic to sub-neutral conditions, with all lab pH values below the chronic CCME guideline value (<6.5). Field pH collected at profile depths were all out of range of the chronic CCME guideline (<6.5). Total aluminum exceeded the chronic CCME guideline (0.0050 mg/L) in all samples. Total arsenic and total iron values exceeded the chronic CCME guideline values (0.0050 mg/L and 0.30 mg/L, respectively) in both SW-13S and SW-13D samples collected in September 2018. In general, metals concentrations are similar between SW-13S and SW-13D samples and no consistent differences over time have been identified.

Table 3 outlines the field parameters for the water quality profile, this table can be used in conjunction with the surface water quality results found in Appendix A.

Table 3: Water Quality Profile Field Parameter Summary for SW-13

5.0 REPORT LIMITATIONS

Golder Associates Ltd. (Golder) has not conducted the surface water quality field monitoring, and the scope of work conducted strictly lies within the interpretation and characterization of data obtained by the third-party consultants. Surface water quality monitoring is currently being undertaken by McCallum Environmental Limited (McCallum). Golder understands that McCallum has completed the surface water quality monitoring in a manner consistent with industry standards and a standard of work consistent with those expected from professional consulting services. Golder assumes no responsibility for the quality, reliability, and/or representativeness of the data presented in this report and has interpreted the data provided on the basis that it is reliable, and representative of the locations described by McCallum.

6.0 CLOSURE

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported: unless

indicated otherwise, associated sample data are not blank corrected.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) The APHA Standard Method require pH to be analyzed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the APHA Standard Method holding time.

(2) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	2.0°C
-----------	-------

Sample ESZ684 [SW-1] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample ESZ685 [SW-2] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample ESZ686 [SW-3] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample ESZ687 [SW-4] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample ESZ688 [SW-5] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample ESZ689 [SW-6] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample ESZ690 [SW-7] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample ESZ691 [SW-8] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Results relate only to the items tested.

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

QC Standard: A sample of known concentration prepared by an external agency under stringent conditions. Used as an independent check of method accuracy.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) Elevated reporting limit due to sample matrix.

(2) Reporting limit was increased due to turbidity.

VALIDATION SIGNATURE PAGE

The analytical data and all QC contained in this report were reviewed and validated by the following individual(s).

Kevin A. MacDonald

Kevin MacDonald, Inorganics Supervisor

Maxxam has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per section 5.10.2 of ISO/IEC 17025:2005(E), signing the reports. For Service Group specific validation please refer to the Validation Signature Page.

accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported: unless indicated otherwise, associated sample data are not blank corrected.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) The APHA Standard Method require pH to be analyzed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the APHA Standard Method holding time.

(2) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC.

QUALITY ASSURANCE REPORT(CONT'D)

QA/QC	Batch	Init	QC Type	Parameter	Date Analyzed	Value	Recovery	UNITS	QC Limits
	5222633	SSI	RPD [FIF019-03]	Total Organic Carbon (C)	2017/10/20	1.5		%	20
<p>N/A = Not Applicable</p> <p>Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.</p> <p>Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.</p> <p>QC Standard: A sample of known concentration prepared by an external agency under stringent conditions. Used as an independent check of method accuracy.</p> <p>Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.</p> <p>Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.</p> <p>NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)</p> <p>NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).</p>									

VALIDATION SIGNATURE PAGE

The analytical data and all QC contained in this report were reviewed and validated by the following individual(s).

Kevin MacDonald, Inorganics Supervisor

Mike MacGillivray, Scientific Specialist (Inorganics)

Maxxam has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per section 5.10.2 of ISO/IEC 17025:2005(E), signing the reports. For Service Group specific validation please refer to the Validation Signature Page.

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using

Your Project #: 17-191 FMS
Your C.O.C. #: 643303-01-01, 643303-02-01

Attention: Ryan Gardiner

McCallum Environmental
2 Bluewater Rd., Suite 135
Bedford, NS
CANADA B4B 1G7

Report Date: 2018/01/04

Report #: R4928659

Version: 1 - Final

CERTIFICATE OF ANALYSIS

MAXXAM JOB #: B7T2514

Received: 2017/12/22, 14:37

accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) The APHA Standard Method require pH to be analyzed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the APHA Standard Method holding time.

(2) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC.

Encryption Key

Please direct all questions regarding this Certificate of Analysis to your Project Manager.

	UNITS	SW13	RDL	QC Batch
Metals				
Total Mercury (Hg)	ug/L	ND	0.013	5336793
RDL = Reportable Detection Limit QC Batch = Quality Control Batch ND = Not detected				

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	3.3°C
-----------	-------

Sample FVG654 [SW1] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample FVG655 [SW2] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample FVG656 [SW3] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample FVG657 [SW4] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample FVG658 [SW5] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample FVG659 [SW6] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample FVG660 [SW7] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample FVG661 [SW8] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample FVG662 [SW9] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample FVG663 [SW10] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample FVG667 [SW11] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample FVG668 [SW12] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample FVG669 [SW13] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Results relate only to the items tested.

<p>N/A = Not Applicable</p> <p>Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.</p> <p>Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.</p> <p>QC Standard: A sample of known concentration prepared by an external agency under stringent conditions. Used as an independent check of method accuracy.</p> <p>Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.</p> <p>Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.</p> <p>NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)</p> <p>NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).</p> <p>(1) Elevated reporting limit due to sample matrix.</p>									

VALIDATION SIGNATURE PAGE

The analytical data and all QC contained in this report were reviewed and validated by the following individual(s).

Mike MacGillivray, Scientific Specialist (Inorganics)

Maxxam has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per section 5.10.2 of ISO/IEC 17025:2005(E), signing the reports. For Service Group specific validation please refer to the Validation Signature Page.

CERTIFICATE OF ANALYSIS

MAXXAM JOB #: B8F1960

Received: 2018/06/19, 13:27

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) The APHA Standard Method require pH to be analyzed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the APHA Standard Method holding time.

(2) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC.

Encryption Key

Please direct all questions regarding this Certificate of Analysis to your Project Manager.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	6.7°C
-----------	-------

Sample HAB709 [SW1] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HAB710 [SW2] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HAB711 [SW3] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HAB712 [SW4] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HAB713 [SW5] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HAB714 [SW6] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HAB715 [SW7] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

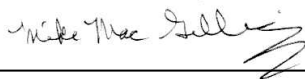

Sample HAB716 [SW8] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HAB718 [SW10] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Results relate only to the items tested.

VALIDATION SIGNATURE PAGE

The analytical data and all QC contained in this report were reviewed and validated by the following individual(s).

Mike MacGillivray, Scientific Specialist (Inorganics)

Maxxam has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per section 5.10.2 of ISO/IEC 17025:2005(E), signing the reports. For Service Group specific validation please refer to the Validation Signature Page.

CERTIFICATE OF ANALYSIS

MAXXAM JOB #: B8H0622

Received: 2018/07/10, 10:47

data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) The APHA Standard Method require pH to be analyzed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the APHA Standard Method holding time.

(2) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC.

CERTIFICATE OF ANALYSIS – PARTIAL RESULTS

MAXXAM JOB #: B8N5349

Received: 2018/09/10, 16:29

Sample Matrix: Water
Samples Received: 7

Analyses	Date		Laboratory Method	Reference
	Quantity Extracted	Analyzed		
Chlorophyll A (Sub from Bedford) (1)	7	2018/09/11 2018/09/19		

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing. Maxxam is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested. When sampling is not conducted by Maxxam, results relate to the supplied samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing. Maxxam is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested. When sampling is not conducted by Maxxam, results relate to the supplied samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

- (1) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC
- (2) The APHA Standard Method require pH to be analyzed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the APHA Standard Method holding time.
- (3) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC.

CERTIFICATE OF ANALYSIS – PARTIAL RESULTS

MAXXAM JOB #: B8N6894

Received: 2018/09/12, 11:44

Sample Matrix: Water
Samples Received: 2

Analyses	Date		Laboratory Method	Reference
	Quantity Extracted	Analyzed		
Chlorophyll A (Sub from Bedford) (1)	2	2018/09/13	2018/09/19	

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing. Maxxam is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested. When sampling is not conducted by Maxxam, results relate to the supplied samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing. Maxxam is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested. When sampling is not conducted by Maxxam, results relate to the supplied samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

- (1) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC
- (2) The APHA Standard Method require pH to be analyzed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the APHA Standard Method holding time.
- (3) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC.

Encryption Key

=====
This report has been generated and distributed using a secure automated process.

Maxxam has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per section 5.10.2 of ISO/IEC 17025:2005(E), signing the reports. For Service Group specific validation please refer to the Validation Signature Page.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	9.7°C
Package 2	10.0°C
Package 3	10.3°C
Package 4	10.3°C

Sample HSU395 [SW13 SURFACE] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HSU396 [SW13 SURFACE FILTERED] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HSU397 [SW13 DEPTH] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HSU398 [SW13 DEPTH FILTERED] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HSU399 [SW14] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HSU400 [SW14 FILTERED] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HSU401 [SW7] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HSU402 [SW7 FILTERED] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HSU403 [SW1] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HSU404 [SW1 FILTERED] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HSU405 [SW2] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HSU406 [SW2 FILTERED] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HSU408 [FILTER BLANK] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample HSU409 [FIELD BLANK] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Results relate only to the items tested.

VALIDATION SIGNATURE PAGE

The analytical data and all QC contained in this report were reviewed and validated by the following individual(s).

Eric Dearman, Scientific Specialist

Mike MacGillivray, Scientific Specialist (Inorganics)

Maxxam has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per section 5.10.2 of ISO/IEC 17025:2005(E), signing the reports. For Service Group specific validation please refer to the Validation Signature Page.

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing. Maxxam is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested. When sampling is not conducted by Maxxam, results relate to the supplied samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

Date Received: December 6, 2018
Sampling Date: December 3, 2018

Matrix: Water

Transaction ID: 870

PO/Contract No.:

Date Analysed: December 18, 2018
Analyst(s): Jason S.

Analytical Method: M10211: Methyl Mercury in Water by Distillation, Aqueous Ethylation, Purge and Trap, and CVAFS - Tekran 2700 Mercury Analyser (Version 1)

Comments: Sample SW 3 had particulates present, while all other samples were yellow in colour with particulates present.

Detection Limit: 0.08 ng/L (ML). MDL=0.03 ng/L (based on 7 replicates of method blanks with 98% confidence level and the analysis of 45mL of raw sample and 20mL of distillate). For reporting purpose samples will be flagged below the ML which is considered a practical detection limit.

Estimated Uncertainty: The estimated uncertainty of this method has preliminarily been determined to be ± 10 % at methyl mercury concentrations of 0.5 and 2.5 ng/L (95 % confidence). Uncertainty at 0.1 ng/L is 13% (95% confidence).

Results authorized by Dr. Robert J. Flett, Chief Scientist

* : See 'Comments' section above for discussion.

This test report shall not be reproduced, except in full, without written approval of the laboratory.

-- : Result below the official detection limit for this analyte in this matrix.

Note: Results relate only to the items tested.

Dup : Duplicate - two subsamples of the same sample carried through the analytical procedure in an identical manner.

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025:2005 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing. Maxxam is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested. When sampling is not conducted by Maxxam, results relate to the supplied samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	-0.7°C
Package 2	0.0°C

Sample IMC331 [SW13 SURFACE] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample IMC332 [SW13 SURFACE FILTERED] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample IMC333 [SW13 DEPTH] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample IMC334 [SW13 DEPTH FILTERED] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

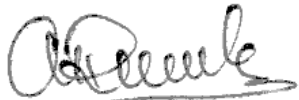

Sample IMC335 [SW6] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample IMC336 [SW6 FILTERED] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Results relate only to the items tested.

VALIDATION SIGNATURE PAGE

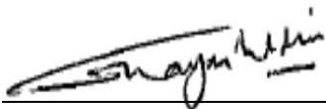

The analytical data and all QC contained in this report were reviewed and validated by the following individual(s).

Anastassia Hamanov, Scientific Specialist

Miryam Assayag

Ghayasuddin Khan, M.Sc., P.Chem., QP, Scientific Specialist, Inorganics

Gina Thompson, Inorganics General Chemistry Supervisor

Mike MacGillivray, Scientific Specialist (Inorganics)

Steven Simpson, Lab Director

Maxxam has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per section 5.10.2 of ISO/IEC 17025:2005(E), signing the reports. For Service Group specific validation please refer to the Validation Signature Page.

Determination of chlorophyll a by fluorescence

Client: Maxxam Analytics Inc., 200 Bluewater Road, Bedford, NS, B4B 1G9

Attention: Maryann Comeau

Received: 2018-12-06

Project #: B8W5998

Completed: 2018-12-10

Hugh MacIntyre

Hugh MacIntyre, Ph.D.

Chl *a* (chlorophyll *a*; $\mu\text{g L}^{-1}$) determined by the acidification method (Holm-Hansen et al., 1965). Estimates made with the non-acidification method (Welschmeyer, 1994) are shown for comparison.

The non-acidification method is considered more reliable than the acidification method in correcting for bias due to the contributions of chlorophyll *b* and chlorophyll degradation products. Holm-Hansen O, Lorenzen CJ, Holmes RW, Strickland JDH (1965) Fluorometric determination of chlorophyll.

J Conseil 30:3-15

Welschmeyer NA (1994) Fluorometric analysis of chlorophyll *a* in the presence of chlorophyll *b* and phaeopigments.

Limnol Oceanogr 39:1985-1992

 Page 1 of 1

CLIENT: Maxxam Analytics - Bedford: B8W5998

200 Bluewater Road, Suite 105
 Bedford, NS B4B 1G9

Date Received: December 7, 2018

Sampling Date: December 5, 2018

Matrix: Water

Transaction ID: 870

PO/Contract No.:

Date Analysed: December 18, 2018

Analyst(s): Jason S.

Analytical Method: M10211: Methyl Mercury in Water by Distillation, Aqueous Ethylation, Purge and Trap, and CVAFS - Tekran 2700 Mercury Analyser (Version 1)

Comments: Samples were yellow in colour with particulates.

Detection Limit: 0.08 ng/L (ML). MDL=0.03 ng/L (based on 7 replicates of method blanks with 98% confidence level and the analysis of 45mL of raw sample and 20mL of distillate). For reporting purpose samples will be flagged below the ML which is considered a practical detection limit.

Estimated Uncertainty: The estimated uncertainty of this method has preliminarily been determined to be ± 10 % at methyl mercury concentrations of 0.5 and 2.5 ng/L (95 % confidence). Uncertainty at 0.1 ng/L is 13% (95% confidence).

Results authorized by Dr. Robert J. Flett, Chief Scientist

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Received: 2019/04/16, 17:00

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing. Maxxam is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested. When sampling is not conducted by Maxxam, results relate to the supplied samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

- (1) This test was performed by Maxxam Analytics Mississauga
- (2) This test was performed by Bedford To Montreal Offsite
- (3) This test was performed by Maxxam Analytics Kitimat
- (4) This test was performed by Dalhousie Dept of Oceanography
- (5) This test was performed by Sub Bedford to Flett Research
- (6) Non-accredited test method
- (7) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC
- (8) The APHA Standard Method require pH to be analyzed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the APHA Standard Method holding time.
- (9) Radium-226 results have not been corrected for blanks.
- (10) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	15.3°C
Package 2	2.7°C

Note: Chlorophyll A results have some negative values reported. As per Dalhousie University: The negative value arises because the sample contains something that quenches the residual signal inherent in a blank. If the client is using it to correct field data, the negative value is the appropriate one to use.

Sample JLV486 [SW13 SURFACE] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JLV487 [SW13 DEPTH] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JLV489 [SW13 SURFACE FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JLV490 [SW13 DEPTH FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JLV491 [FIELD/FILTER BLANK FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Results relate only to the items tested.

<p>N/A = Not Applicable</p> <p>Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.</p> <p>Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.</p> <p>QC Standard: A sample of known concentration prepared by an external agency under stringent conditions. Used as an independent check of method accuracy.</p> <p>Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.</p> <p>Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.</p> <p>NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)</p> <p>NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).</p> <p>(1) Elevated reporting limit due to turbidity.</p>									

VALIDATION SIGNATURE PAGE

The analytical data and all QC contained in this report were reviewed and validated by the following individual(s).

Miryam Assayag

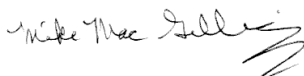

Eric Dearman, Scientific Specialist

Eva Pranjic, M.Sc., C.Chem, Scientific Specialist

Gina Thompson, Inorganics General Chemistry Supervisor

Mike MacGillivray, Scientific Specialist (Inorganics)

Steven Simpson, Lab Director

Maxxam has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per section 5.10.2 of ISO/IEC 17025:2005(E), signing the reports. For Service Group specific validation please refer to the Validation Signature Page.

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless

indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

- (1) This test was performed by Bureau Veritas Laboratories Mississauga
- (2) This test was performed by Bedford To Montreal Offsite
- (3) This test was performed by Bureau Veritas Laboratories Kitimat
- (4) This test was performed by Sub Bedford to Flett Research
- (5) Non-accredited test method
- (6) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC
- (7) The APHA Standard Method require pH to be analyzed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the APHA Standard Method holding time.
- (8) Radium-226 results have not been corrected for blanks.
- (9) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC.

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

QC Standard: A sample of known concentration prepared by an external agency under stringent conditions. Used as an independent check of method accuracy.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) Poor Spike recovery due to sample matrix interference.

(2) Poor duplicate agreement due to matrix interferences.

Determination of chlorophyll a by fluorescence

Client: Bureau Veritas Laboratories, 200 Blewater Road, Bedford, NS, B4B 1G9

Attention: Maryann Comeau

Received: 2019-06-05

Project #: B9E9646

Completed: 2019-06-10

Hugh MacIntyre

Hugh MacIntyre, Ph.D.

Chl *a* (chlorophyll *a*; $\mu\text{g L}^{-1}$) determined by the acidification method (Holm-Hansen et al., 1965). Estimates made with the non-acidification method (Welschmeyer, 1994) are shown for comparison.

The non-acidification method is considered more reliable than the acidification method in correcting for bias due to the contributions of chlorophyll *b* and chlorophyll degradation products.

Holm-Hansen O, Lorenzen CJ, Holmes RW, Strickland JDH (1965) Fluorometric determination of chlorophyll.

J Conseil 30:3-15

Welschmeyer NA (1994) Fluorometric analysis of chlorophyll *a* in the presence of chlorophyll *b* and phaeopigments.

Limnol Oceanogr 39:1985-1992

 Page 1 of 1

CLIENT: Bureau Veritas - Bedford: B9E9646

200 Bluewater Road, Suite 105
 Bedford, NS B4B 1G9

Date Received: June 6, 2019

Sampling Date: June 3, 2019

Matrix: Water

Transaction ID: 894

PO/Contract No.:

Date Analysed: June 18, 2019

Analyst(s): Jason S.

Analytical Method: M10211: Methyl Mercury in Water by Distillation, Aqueous Ethylation, Purge and Trap, and CVAFS - Tekran 2700 Mercury Analyser (Version 2)

Comments: Samples (except for FIELD/FILTER BLANK) had particulates present.
 Samples SW 11 and SW 12 were also more yellowish in colour.

Detection Limit: The method detection limit (MDL) for this method is 0.0035 ng/L. The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration exceeds zero and is based on the distillation of 45mL of raw sample and analysis of 20mL of a 40mL distillate.

For reporting purpose samples are flagged when concentration is below the methods EPA defined minimum level (ML= 0.0135 ng/L).
 As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall estimated uncertainty (95 % confidence, K=2) of this method varies with analyte concentration.
 When methyl mercury concentrations exceed 0.03ng/L the estimated uncertainty is ±15%. At a concentration of 0.01ng/L uncertainty is ± 23%. Method uncertainty for concentrations at MDL (0.0035ng/L) is ±75%.

Results authorized by Dr. Robert J. Flett, Chief Scientist

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All

CERTIFICATE OF ANALYSIS

BV LABS JOB #: B9F1476

Received: 2019/06/04, 15:08

data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

- (1) This test was performed by Bureau Veritas Laboratories Mississauga
- (2) This test was performed by Bedford To Montreal Offsite
- (3) This test was performed by Bureau Veritas Laboratories Kitimat
- (4) This test was performed by Sub Bedford to Flett Research
- (5) Non-accredited test method
- (6) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC
- (7) The APHA Standard Method require pH to be analyzed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the APHA Standard Method holding time.
- (8) Radium-226 results have not been corrected for blanks.
- (9) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	6.7°C
Package 2	7.3°C
Package 3	11.3°C
Package 4	5.3°C

Sample JXF834 [SW 1] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JXF850 [SW 1 (FILTERED)] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JXF852 [SW 4 (FILTERED)] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JXF853 [SW 5] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JXF856 [SW 5 (FILTERED)] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JXF859 [SW 8] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JXF861 [SW 9] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JXF862 [SW 9 (FILTERED)] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JXF863 [SW 16] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JXF877 [FMS DUP 2] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JXF879 [FMS DUP 2 FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JXF881 [FIELD/FILTER BLANK 2 FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Results relate only to the items tested.

QUALITY ASSURANCE REPORT(CONT'D)

QA/QC	Batch	Init	QC Type	Parameter	Date Analyzed	Value	Recovery	UNITS	QC Limits
	6192962	éFQ	Method Blank	WAD Cyanide (Free)	2019/06/16	<0.0030		mg/L	
<p>N/A = Not Applicable</p> <p>Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.</p> <p>Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.</p> <p>QC Standard: A sample of known concentration prepared by an external agency under stringent conditions. Used as an independent check of method accuracy.</p> <p>Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.</p> <p>Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.</p> <p>NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)</p> <p>NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).</p> <p>(1) Low matrix spike recovery due to sample matrix interference.</p> <p>(2) Poor duplicate agreement due to sample matrix, results confirmed by repeat analysis.</p> <p>(3) Elevated RDL due to method blank performance.</p>									

VALIDATION SIGNATURE PAGE

The analytical data and all QC contained in this report were reviewed and validated by the following individual(s).

Caroline Bougie

Determination of chlorophyll a by fluorescence

Client: Bureau Veritas Laboratories, 200 Blewater Road, Bedford, NS, B4B 1G9

Attention: Maryann Comeau

Received: 2019-06-06

Project #: B9F1476

Completed: 2019-06-11

Hugh MacIntyre

Hugh MacIntyre, Ph.D.

Chl *a* (chlorophyll *a*; $\mu\text{g L}^{-1}$) determined by the acidification method (Holm-Hansen et al., 1965). Estimates made with the non-acidification method (Welschmeyer, 1994) are shown for comparison.

The non-acidification method is considered more reliable than the acidification method in correcting for bias due to the contributions of chlorophyll *b* and chlorophyll degradation products.

Holm-Hansen O, Lorenzen CJ, Holmes RW, Strickland JDH (1965) Fluorometric determination of chlorophyll.

J Conseil 30:3-15

Welschmeyer NA (1994) Fluorometric analysis of chlorophyll *a* in the presence of chlorophyll *b* and phaeopigments.

Page 1 of 1

CLIENT: Bureau Veritas - Bedford: B9F1476

200 Bluewater Road, Suite 105
Bedford, NS B4B 1G9

Date Received: June 7, 2019

Sampling Date: June 4, 2019

Matrix: Water

Transaction ID: 894

PO/Contract No.:

Date Analysed: June 19, 2019

Analyst(s): Jason S.

Analytical Method: M10211: Methyl Mercury in Water by Distillation, Aqueous Ethylation, Purge and Trap, and CVAFS - Tekran 2700 Mercury Analyser (Version 2)

Comments: Samples had particulates present.

Detection Limit: The method detection limit (MDL) for this method is 0.0035 ng/L. The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration exceeds zero and is based on the distillation of 45mL of raw sample and analysis of 20mL of a 40mL distillate.

For reporting purpose samples are flagged when concentration is below the methods EPA defined minimum level (ML= 0.0135 ng/L). As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall estimated uncertainty (95 % confidence, K=2) of this method varies with analyte concentration. When methyl mercury concentrations exceed 0.03ng/L the estimated uncertainty is ±15%. At a concentration of 0.01ng/L uncertainty is ± 23%. Method uncertainty for concentrations at MDL (0.0035ng/L) is ±75%.

Results authorized by Dr. Robert J. Flett, Chief Scientist

Remarks:

Bureau Veritas Laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by BV Labs are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in BV Labs profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and BV Labs in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

BV Labs liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. BV Labs has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by BV Labs, unless otherwise agreed in writing. BV Labs is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

CERTIFICATE OF ANALYSIS

BV LABS JOB #: B9F2843

Received: 2019/06/05, 15:45

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested. When sampling is not conducted by BV Labs, results relate to the supplied samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

- (1) This test was performed by Bureau Veritas Laboratories Mississauga
- (2) This test was performed by Bedford To Montreal Offsite
- (3) This test was performed by Bureau Veritas Laboratories Kitimat
- (4) This test was performed by Dalhousie Dept of Oceanography
- (5) This test was performed by Sub Bedford to Flett Research
- (6) Non-accredited test method
- (7) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC
- (8) The APHA Standard Method require pH to be analyzed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the APHA Standard Method holding time.
- (9) Radium-226 results have not been corrected for blanks.
- (10) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	5.3°C
Package 2	3.3°C

Sample JXN061 [SW 13 DEPTH] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JXN062 [SW 13 DEPTH (FILTERED)] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JXN063 [FIELD/FILTER BLANK 3] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JXN064 [FIELD/FILTER BLANK 3 FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Results relate only to the items tested.

N/A = Not Applicable

Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.

Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.

QC Standard: A sample of known concentration prepared by an external agency under stringent conditions. Used as an independent check of method accuracy.

Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)

NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).

(1) Elevated reporting limit due to turbidity.

(2) Elevated RDL due to method blank performance.

VALIDATION SIGNATURE PAGE

The analytical data and all QC contained in this report were reviewed and validated by the following individual(s).

Anastassia Hamanov, Scientific Specialist

Caroline Bougie, B.Sc. Chemist

Eric Dearman, Scientific Specialist

Gina Thompson, Inorganics General Chemistry Supervisor

Mike MacGillivray, Scientific Specialist (Inorganics)

Steven Simpson, Lab Director

BV Labs has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per section 5.10.2 of ISO/IEC 17025:2005(E), signing the reports. For Service Group specific validation please refer to the Validation Signature Page.

Determination of chlorophyll a by fluorescence

Client: Bureau Veritas Laboratories, 200 Blewater Road, Bedford, NS, B4B 1G9

Attention: Maryann Comeau

Received: 2019-06-06

Project #: B9F2843

Completed: 2019-06-10

Hugh MacIntyre

Hugh MacIntyre, Ph.D.

Chl *a* (chlorophyll *a*; $\mu\text{g L}^{-1}$) determined by the acidification method (Holm-Hansen et al., 1965). Estimates made with the non-acidification method (Welschmeyer, 1994) are shown for comparison.

The non-acidification method is considered more reliable than the acidification method in correcting for bias due to the contributions of chlorophyll *b* and chlorophyll degradation products.

Holm-Hansen O, Lorenzen CJ, Holmes RW, Strickland JDH (1965) Fluorometric determination of chlorophyll.

J Conseil 30:3-15

Welschmeyer NA (1994) Fluorometric analysis of chlorophyll *a* in the presence of chlorophyll *b* and phaeopigments.

Limnol Oceanogr 39:1985-1992

Page 1 of 1

CLIENT: Bureau Veritas - Bedford: B9F2843

200 Bluewater Road, Suite 105
Bedford, NS B4B 1G9

Date Received: June 7, 2019

Sampling Date: June 5, 2019

Matrix: Water

Transaction ID: 894

PO/Contract No.:

Date Analysed: June 18, 2019

Analyst(s): Jason S.

Analytical Method: M10211: Methyl Mercury in Water by Distillation, Aqueous Ethylation, Purge and Trap, and CVAFS - Tekran 2700 Mercury Analyser (Version 2)

Comments: Samples SW 13 SURFACE and SW 13 DEPTH had particulates present.

Detection Limit: The method detection limit (MDL) for this method is 0.0035 ng/L. The MDL is the minimum concentration that can be reported with 99% confidence that the measured concentration exceeds zero and is based on the distillation of 45mL of raw sample and analysis of 20mL of a 40mL distillate.

For reporting purpose samples are flagged when concentration is below the methods EPA defined minimum level (ML= 0.0135 ng/L). As concentration rises above the MDL confidence that the analyte is present approaches 100% at and above the ML.

Estimated Uncertainty: Overall estimated uncertainty (95 % confidence, K=2) of this method varies with analyte concentration. When methyl mercury concentrations exceed 0.03ng/L the estimated uncertainty is ±15%. At a concentration of 0.01ng/L uncertainty is ± 23%. Method uncertainty for concentrations at MDL (0.0035ng/L) is ±75%.

Results authorized by **Dr. Robert J. Flett, Chief Scientist**

CERTIFICATE OF ANALYSIS

MAXXAM JOB #: B874129

Received: 2018/04/04, 09:49

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) The APHA Standard Method require pH to be analyzed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the APHA Standard Method holding time.

(2) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	4.3°C
-----------	-------

Sample GJP876 [SW1] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample GJP877 [SW2] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample GJP878 [SW3] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample GJP880 [SW5] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample GJP881 [SW6] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample GJP882 [SW7] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample GJP883 [SW8] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample GJP884 [SW9] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample GJP885 [SW10] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample GJP889 [SW11] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

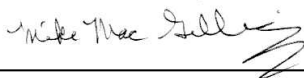

Sample GJP890 [SW12] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample GJP891 [SW13] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Results relate only to the items tested.

VALIDATION SIGNATURE PAGE

The analytical data and all QC contained in this report were reviewed and validated by the following individual(s).

Mike MacGillivray, Scientific Specialist (Inorganics)

Maxxam has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per section 5.10.2 of ISO/IEC 17025:2005(E), signing the reports. For Service Group specific validation please refer to the Validation Signature Page.

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing. Maxxam is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested. When sampling is not conducted by Maxxam, results relate to the supplied samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

- (1) This test was performed by Maxxam Analytics Mississauga
- (2) This test was performed by Bedford To Montreal Offsite
- (3) This test was performed by Maxxam Analytics Kitimat
- (4) This test was performed by Dalhousie Dept of Oceanography
- (5) This test was performed by Sub Bedford to Flett Research
- (6) Non-accredited test method
- (7) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC
- (8) The APHA Standard Method require pH to be analyzed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the APHA Standard Method holding time.
- (9) Radium-226 results have not been corrected for blanks.
- (10) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC.

Sample JHH830 [SW7] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHH831 [SW14] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHH832 [SW16] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHH833 [DUPLICATE 1] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHH834 [SW1 FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHH835 [SW2 FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHH836 [SW4 FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHH837 [SW5 FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHH838 [SW7 FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHH839 [SW14 FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHH840 [SW16 FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHH841 [DUPLICATE 1 FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHH842 [FIELD/FILTER BLANK] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHH843 [FIELD/FILTER BLANK FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Results relate only to the items tested.

<p>N/A = Not Applicable</p> <p>Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.</p> <p>Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.</p> <p>QC Standard: A sample of known concentration prepared by an external agency under stringent conditions. Used as an independent check of method accuracy.</p> <p>Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.</p> <p>Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.</p> <p>NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)</p> <p>NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).</p> <p>(1) Poor spike recovery due to sample matrix, result confirmed by repeat analysis.</p>									

VALIDATION SIGNATURE PAGE

The analytical data and all QC contained in this report were reviewed and validated by the following individual(s).

Anastassia Hamanov, Scientific Specialist

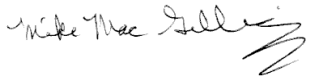

Miryam Assayag

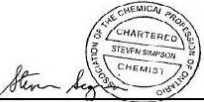

Eric Dearman, Scientific Specialist

Gina Thompson, Inorganics General Chemistry Supervisor

Mike MacGillivray, Scientific Specialist (Inorganics)

Steven Simpson, Lab Director

Maxxam has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per section 5.10.2 of ISO/IEC 17025:2005(E), signing the reports. For Service Group specific validation please refer to the Validation Signature Page.

CERTIFICATE OF ANALYSIS

MAXXAM JOB #: B979498

Received: 2019/03/27, 15:45

Remarks:

Maxxam Analytics' laboratories are accredited to ISO/IEC 17025 for specific parameters on scopes of accreditation. Unless otherwise noted, procedures used by Maxxam are based upon recognized Provincial, Federal or US method compendia such as CCME, MDDELCC, EPA, APHA.

All work recorded herein has been done in accordance with procedures and practices ordinarily exercised by professionals in Maxxam's profession using accepted testing methodologies, quality assurance and quality control procedures (except where otherwise agreed by the client and Maxxam in writing). All data is in statistical control and has met quality control and method performance criteria unless otherwise noted. All method blanks are reported; unless indicated otherwise, associated sample data are not blank corrected. Where applicable, unless otherwise noted, Measurement Uncertainty has not been accounted for when stating conformity to the referenced standard.

Maxxam Analytics' liability is limited to the actual cost of the requested analyses, unless otherwise agreed in writing. There is no other warranty expressed or implied. Maxxam has been retained to provide analysis of samples provided by the Client using the testing methodology referenced in this report. Interpretation and use of test results are the sole responsibility of the Client and are not within the scope of services provided by Maxxam, unless otherwise agreed in writing. Maxxam is not responsible for the accuracy or any data impacts, that result from the information provided by the customer or their agent.

Solid sample results, except biota, are based on dry weight unless otherwise indicated. Organic analyses are not recovery corrected except for isotope dilution methods.

Results relate to samples tested. When sampling is not conducted by Maxxam, results relate to the supplied samples tested.

This Certificate shall not be reproduced except in full, without the written approval of the laboratory.

Reference Method suffix "m" indicates test methods incorporate validated modifications from specific reference methods to improve performance.

* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

- (1) This test was performed by Maxxam Analytics Mississauga
- (2) This test was performed by Bedford To Montreal Offsite
- (3) This test was performed by Maxxam Analytics Kitimat
- (4) This test was performed by Dalhousie Dept of Oceanography
- (5) This test was performed by Sub Bedford to Flett Research
- (6) Non-accredited test method
- (7) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC
- (8) The APHA Standard Method require pH to be analyzed within 15 minutes of sampling and therefore field analysis is required for compliance. All Laboratory pH analyses in this report are reported past the APHA Standard Method holding time.
- (9) Radium-226 results have not been corrected for blanks.
- (10) TOC / DOC present in the sample should be considered as non-purgeable TOC / DOC.

GENERAL COMMENTS

Each temperature is the average of up to three cooler temperatures taken at receipt

Package 1	0.3°C
Package 2	4.0°C
Package 3	2.3°C
Package 4	2.3°C

Sample JHL218 [SW6] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHL219 [SW8] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHL220 [SW9] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHL221 [SW10] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHL223 [SW11] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHL224 [SW12] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHL226 [FMS DUP 2] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHL228 [SW6 FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHL229 [SW8 FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHL230 [SW9 FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHL231 [SW10 FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHL232 [SW11 FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHL233 [SW12 F] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHL234 [FIELD/FILTER FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Sample JHL235 [FMS DUP 2 FF] : RCap Ion Balance acceptable. Anion/cation agreement within 0.2 meq/L.

Results relate only to the items tested.

QUALITY ASSURANCE REPORT(CONT'D)

QA/QC	Batch	Init	QC Type	Parameter	Date Analyzed	Value	Recovery	UNITS	QC Limits
	6053364	éBP	RPD [JHL218-12]	WAD Cyanide (Free)	2019/04/03	NC		%	25
<p>N/A = Not Applicable</p> <p>Duplicate: Paired analysis of a separate portion of the same sample. Used to evaluate the variance in the measurement.</p> <p>Matrix Spike: A sample to which a known amount of the analyte of interest has been added. Used to evaluate sample matrix interference.</p> <p>QC Standard: A sample of known concentration prepared by an external agency under stringent conditions. Used as an independent check of method accuracy.</p> <p>Spiked Blank: A blank matrix sample to which a known amount of the analyte, usually from a second source, has been added. Used to evaluate method accuracy.</p> <p>Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.</p> <p>NC (Matrix Spike): The recovery in the matrix spike was not calculated. The relative difference between the concentration in the parent sample and the spike amount was too small to permit a reliable recovery calculation (matrix spike concentration was less than the native sample concentration)</p> <p>NC (Duplicate RPD): The duplicate RPD was not calculated. The concentration in the sample and/or duplicate was too low to permit a reliable RPD calculation (absolute difference <= 2x RDL).</p> <p>(1) Method Blank result high. All other QC acceptable. Sample results confirmed by re-analysis.</p>									

VALIDATION SIGNATURE PAGE

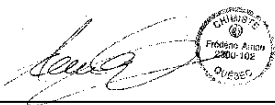

The analytical data and all QC contained in this report were reviewed and validated by the following individual(s).

Anastassia Hamanov, Scientific Specialist

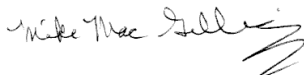

Eric Dearman, Scientific Specialist

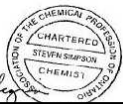

Frederic Arnau, B.Sc., Chemist, Scientific Service Specialist

Gina Thompson, Inorganics General Chemistry Supervisor

Mike MacGillivray, Scientific Specialist (Inorganics)

Steven Simpson, Lab Director

Maxxam has procedures in place to guard against improper use of the electronic signature and have the required "signatories", as per section 5.10.2 of ISO/IEC 17025:2005(E), signing the reports. For Service Group specific validation please refer to the Validation Signature Page.
